## **FRCPATH Curriculum for Clinical Scientists in Virology (Higher Specialist Scientific Training)**

### **1.1 The Role of the Consultant Clinical Scientist in Virology**

#### **Context**

Virological disease has become more important to human health in recent years as advances in medicine have unfolded, the number of people with immunosuppression has increased and more antiviral treatments have become available. A significant proportion of the population experience viral infections each year, ranging from minor ailments like coughs and colds to life-threatening diseases like AIDS, chronic hepatitis and pandemic influenza. The profession of virology has a long-standing tradition of the application of science from research to clinical practice, applied for the benefit of large numbers of patients.

Clinical scientists in virology deliver a timely, caring and effective diagnostic laboratory and clinical service to patients. Through a programme of Higher Specialist Scientist Training (HSST) reflecting the standards of training undertaken by doctors to train as consultants, selected clinical scientists will bring high-level scientific and clinical leadership as Consultant Clinical Scientists. In conjunction with medical colleagues in virology, microbiology and infectious diseases and with other professionals, they will challenge the evidence of existing practice, innovate and introduce new investigations and treatments and build the evidence for change through ethical and appropriate clinical research to influence practice in the workplace and nationally.

#### **Scientific Services and Clinical Care**

Consultant Clinical Scientists in virology are the national experts in their clinical scientific service. While their clinical scientist colleagues deliver today's services, Consultant Clinical Scientists prepare for tomorrow. Whilst Healthcare Science Practitioners and Clinical Scientists are trained to follow current guidelines, Consultant Clinical Scientists will be developing the evidence for new ones and contributing strategically to the national development of virology.

They will make continuous critical appraisal of the scientific literature, and contribute to it; they will constantly question the evidence for practice with a sharp focus on patient outcomes, ensuring that investigations and rehabilitation are appropriate, timely and delivered with the needs of patients at the forefront. They will be responsible for ensuring that cutting edge science is introduced into virology scientific practice, and leading developments in a wide range of areas of practice. Throughout, they will be committed to, and experienced in multi-disciplinary team working at the highest level; the various roles within the multi-professional team should collaborate synergistically in a complementary way, based on agreed care pathways that clarify the respective roles of both Clinical Scientists and medical colleagues.

#### **Leadership and Management**

Consultant Clinical Scientist in virology will need to bring strong leadership to their own services and the profession - requiring skills above and beyond simply management. They will give their department's strategic direction, ensuring that this is compatible with the overall direction of the organisation; they will have both the knowledge and authority to develop their service, using vision and their scientific knowledge and expertise to ensure that the potential and rationale for new developments are understood. They will be accountable for service quality, developments and clinical governance, and practised in influencing other colleagues so that excellent science remains at the forefront of clinical practice. In addition they will have a key role in promoting and ensuring quality and consistency of standards across services by promoting networks for quality assurance locally and nationally.

#### **Research, Development, Innovation and Education**

Consultant Clinical Scientists in virology will be clinical scientific leaders and will have the underpinning basic science and research skills to question their own clinical practice, as well as the breadth of cross-disciplinary technical skills to innovate and to effect change. They will be able to evaluate critically the benefits and

opportunities offered by new scientific discoveries and technological advances, contextualising them to the clinical arena and the skills to influence their implementation into service for the benefit of patients. Critically, they will have learnt and practised the skills needed to teach the next generation of clinical scientists how to approach learning about science in health in order to optimise outcomes for patients. Consultant Clinical Scientists in virology will make continuing distinguished contributions to the furtherance of the science and of practice of the specialism, and should be established and known nationally for their contribution, publications and leadership in the profession.

## **1.2 Overall Description of the HSST Programme**

Modernising Scientific Careers (MSC) is a UK programme led by the Chief Scientific Officer (CSO), working in conjunction with the other devolved health administrations and relevant scientific, medical and surgical educational institutions. MSC provides a transparent, standards-driven educational and training framework for more than 45 specialisms in healthcare science.

Higher Specialist Scientist Training (HSST) is a five-year training programme that has been developed to enable a selected cohort of Clinical Scientists to be trained to take on the role of a Consultant Clinical Scientist. During training, Clinical Scientists in HSST and their supervisors will use this HSST curriculum to advance their learning, practice and performance, and monitor their progress by reference to the learning outcomes and competences defined within it. Clinical Scientists in HSST will be encouraged to lead their own learning and to measure their achievement against clear learning objectives. It will help the Clinical Scientist in HSST and their educational supervisor/mentor to maintain a regularly reviewed and updated education plan to ensure that all the outcomes of the curriculum are met. Finally, the curriculum will facilitate regular assessment of the Clinical Scientist's progress and satisfactory completion of training against high-quality standards, providing the means by which the public can be assured that individuals are fit for Consultant Clinical Scientist practice.

It is expected that Clinical Scientists in HSST will train in a multi-professional environment with the opportunity to learn and work with those in other training programmes across the health professions, e.g. medical, nursing, pharmacy and allied health professionals, and with those outwith health, for example those following MBA, leadership, management and finance programmes.

## **1.3 Curricula Development, Review, Updating and Implementation**

HSST curricula were developed during 2012–2015 under the auspices of several of the Medical Royal Colleges (MRCs), following the publication in 2012 of a formal statement of support from the Academy of Medical Royal Colleges (AoMRC) [[www.aomrc.org.uk/about-us/news/item/academy-statement.html](http://www.aomrc.org.uk/about-us/news/item/academy-statement.html)]. Membership of the MRC curricula development groups included practising senior healthcare scientists nominated by scientific professional bodies and medical representatives from the MRCs, as well as educationalists from the relevant MRC and MSC teams. Consultant-level scientists from the specific scientific specialism provided the major expert input into the development of the scientific curriculum. The public, a range of scientific and medical professional bodies, universities, patients, employers and trainees were also involved. Specifically, review and comments on this curriculum were sought from other MRCs with an interest in the specialism, their related Specialty Advisory Committees (SACs) and specialist societies, healthcare science professional bodies, trainees in healthcare science, patients and the public. Governance and oversight of curricula development was through a dual process involving each relevant MRC and the Health Education England (HEE) educational approval process on behalf of the National Health Service (NHS) and HEE.

Although the curriculum content is derived from current UK clinical, diagnostic and laboratory practice in clinical science, there have been intensive efforts to identify and predict future technological developments, changes in service delivery and future patient requirements in order to ensure that the curricula are as robust and as sustainable as possible. This is in relation both to scientific content and anticipated future scientific developments (e.g. in genomics and precision/personalised medicine), and is reflective also of the new commissioning system for service and training. There will be regular reviews and updates of the curriculum to ensure that it remains relevant.

Standards of professionalism in healthcare science are set out in *Good Scientific Practice* (GSP; [www.academyforhealthcarescience.co.uk/good-scientific-practice/](http://www.academyforhealthcarescience.co.uk/good-scientific-practice/)), which describes the principles and values developed for the profession and which are comparable to the standards set by the General Medical Council (GMC) for medicine. This has been developed into a GSP syllabus that is common to all HSST curricula. The five domains of GSP emphasise clinical leadership development, expert scientific and clinical practice, research and innovation, and excellent communication and team working behaviours. For the public, it describes more specifically what can be expected from those who will be CCSs responsible for patient care.

The Academy for Healthcare Science (AHCS) will assess applications from Clinical Scientists applying for recognition of previous training, experience and qualifications ('equivalence to HSST'), based on the professional and scientific contents and standards of behaviour set out in the curricula. Applicants seeking equivalence will be evaluated through AHCS processes against HSST curricula and will need to demonstrate that they have met AHCS requirements for the Certificate of Equivalence in a given area of practice. This will entitle the Clinical Scientist to register on the Higher Specialist Scientist (HSS) Register held by the AHCS.

Implementation of the curriculum will be evaluated and monitored by the National School of Healthcare Science (NSHCS) through continuous feedback from training programmes, educational supervisors, trainers, Clinical Scientists in HSST and patients.

#### **1.4 Curriculum Purpose**

The purpose of this HSST curriculum is to define and specify the training programme and outcomes of training to ensure that Clinical Scientists undertaking HSST are fully prepared to provide, lead and innovate scientific services at consultant level in the NHS and in the rest of the UK. It aims to promote excellence through training, assessment and professional development so that Clinical Scientists exiting HSST programmes are fit to practise as Consultant Clinical Scientists.

This HSST curriculum is modular in design. It builds on the Scientist Training Programme (STP) and leads to the Certificate of Completion of Higher Specialist Scientist Training (CCHSST) issued by the NSHCS. Clinical Scientists in HSST will require evidence of satisfactory achievement of the requirements of the GSP professional syllabus, the specialty-specific syllabus and the related assessment programme (including the Innovation in Clinical Sciences [ICS] project), which together form the curriculum for the attainment of the standards of professional and specialism-based knowledge applied to practical, laboratory, clinical, teaching, research activities, as well as innovation. In addition, for those in Physical Science, the Physiological Sciences and Clinical Bioinformatics, the CCHSST will also indicate that the underpinning doctoral programme/award (DClinSci) has been achieved. In the Life Sciences, the CCHSST indicates achievement of the FRCPATH and the ICS project (which together meet the learning outcomes of the doctoral programme), although the doctoral award itself is not required. The CCHSST will enable the AHCS to admit the Clinical Scientist to its HSS Register. Once admitted to this Register, Clinical Scientists will be eligible to apply for available Consultant Clinical Scientist posts.

This curriculum also describes the integral teaching, learning programme and assessment programme that are consistent with the both the Health and Care Professions Council's (HCPC) and the GMC's Standards for Curricula and Assessment Systems (April 2010).

#### **1.5 Entry Requirements**

Once the Local Education and Training Board (LETB) [or equivalent bodies in the rest of the UK] and training provider (which has been accredited by the NSHCS accreditation process) have agreed the establishment of an HSST post, entry into HSST programmes will be through a national competitive appointment and benchmarking process in England, led by the NSHCS.

Eligibility for appointment into an HSST programme requires the following:

- registration (or eligibility and application to register) as a Clinical Scientist with the HCPC;
- *normally* at least one further year in the workplace to consolidate and enhance skills, learning and experience (including research and education);
- where required, applicants must be eligible to register for doctoral-level study at a higher education institution (HEI);
- individual specialisms may also have specialty-specific requirements, which will be clarified at the time of the appointment process for the HSST post through the job description and person specification.

*An individual appointed to an HSST programme may not commence the programme until registration with the HCPC has been completed.*

## 1.6 Routes of Entry

There will be two routes of entry into HSST training. Through the direct entry route, the Clinical Scientist in HSST will be competitively appointed into a formal HSST post, established for the purpose of training a Consultant Clinical Scientist. Alternatively, some Clinical Scientists may enter into HSST with the support of their employers through an in-service training route that does not involve the creation of a new training post *per se*, although the potential appointee will have to meet benchmarking standards for entry into HSST. In both circumstances in England, a training grant will be allocated from the LETB to the provider training unit to support training.

All HSST applicants must participate and be successful in the national appointment process. For direct entry Clinical Scientists this is a competitive process with other applicants for the available training opportunity; for in-service Clinical Scientists, participating in the national selection process ensures benchmarking against the standards for entry into HSST for this specialism. The appointment process will select not only for scientific expertise and talent in all its manifestations, but for abilities in a range of professional areas, including leadership, innovation, personal skills and values.

## 1.7 Equality and Diversity

The AHCS, HEE, MSC, MRCs and scientific professional bodies are committed to the principle of diversity and equality in employment, membership, academic activities, assessment, examinations and training.

As part of this ethos these groups are committed to inspire and support all those who work, train and provide training in healthcare science to operate in a fair, open and honest manner. The approach taken is a comprehensive one and reflects all areas of diversity, recognising the value of each individual. This means that no one is treated less favourably than another on the grounds of ethnic origin, nationality, age, disability, gender, sexual orientation, race, or religion, in accordance with the Equality Act 2010. This reflects not only the letter but also the spirit of equality legislation, taking into account current equality legislation and good practice.

## 1.8 The HSST Curriculum

This curriculum sets out the standards of specialism-based knowledge, clinical judgement, technical and professional skills, attitudes and behaviour that must be acquired in order to practise and progress throughout the five-year training programme. The curriculum comprises the following components:

The ***Specialist Scientific Clinical*** syllabus, providing for:

- a broad understanding of the diagnosis and management of patients within the specialism from a clinical and scientific perspective;
- the diagnostic techniques required in the practice of the specialism;
- understanding of the clinical areas detailed in the curriculum;
- knowledge of the specialist areas defined within the curriculum.

The professional generic **Good Scientific Practice** (GSP) syllabus, setting out the requirement for the:

- communication skills required for practice in the specialism and the teaching, learning and assessment skills necessary for effective practice;
- acquisition of clinical leadership and management skills needed for the excellent delivery and development of virology scientific services;
- experience of research, development and innovation projects, and critical evaluation of published work in order to lead scientific, technological and service innovation;
- need for a life-long commitment to adopting a structured approach to continuing personal and professional development (CPPD);
- experience of the practice of clinical governance<sup>1</sup> and quality improvement activity, including audit (specialist and multidisciplinary) through evaluation of practice against the standards of evidence-based medicine;
- consistent demonstration and practice of attitudes, values and behaviours that support those set out in the NHS Constitution.

### **The Relationship of the GSP Syllabus to the Specialist Scientific Clinical Syllabus**

The professional knowledge, skills and behaviour of *GSP* are contextualised and evidenced through clinical practice. It is not possible to achieve competence in the specialist scientific and clinical syllabus *unless* these professional skills and behaviours are also evident. Clinical Scientists in HSST must be able to show progress in acquiring GSP competences and the underpinning academic knowledge, demonstrating these behaviours across a range of situations as detailed in the scientific clinical syllabus.

### **1.9 The Structure and Operation of the HSST Training Programme**

The broad structure and description of the HSST programme is shown overleaf.

---

<sup>1</sup> *A framework through which NHS organisations are accountable for continuously improving the quality of their services and safeguarding high standards of care, by creating an environment in which excellence in clinical care will flourish.* Schellekens W. *Clinical governance in a changing NHS.* International Journal of Integrated Care, vol 6, April to June 2006.

The implementation and quality management of the HSST programme is the responsibility of the NSHCS, which will ensure through its Themed Boards that Clinical Scientists in HSST are provided with access to an appropriate range of educational experience to complete their training. The appropriate Themed Board in the NSHCS will also monitor and support the overall progress of Clinical Scientists in HSST on a regular basis, throughout the entirety of the programme.

### 1.10 Modularity of Training and Learning

This curriculum has been developed in a modular format, with each module having defined competences, assessment requirements and learning outcomes. There is a staged approach requiring the satisfactory completion of specified modules within each stage prior to progression to the next, so that Clinical Scientists in HSST may not progress to Stage 2 of training until they have satisfactorily completed Stage 1. They will continue to broaden their experience and understanding of common clinical and scientific problems and their management throughout their training. The underpinning doctoral-level programme will provide the underpinning

academic framework for learning to support workplace practice. The knowledge gained and applied will be supported and assessed on an ongoing basis through quality assured workplace-based assessments and through a structured final assessment programme.

### 1.11 Doctoral-level Programme

A doctoral-level academic programme underpins HSST. The purpose of this doctoral-level programme is to formalise and *facilitate the learning* of Clinical Scientists in HSST as they:

- systematically acquire and apply a substantial body of scientific and clinical knowledge at the forefront of their specialism and embrace the future scientific and technology advances within the field;
- create and interpret new knowledge through original research and scholarship requiring advanced academic enquiry;
- systematically acquire, develop and apply the qualities and transferable skills necessary for employment as a Consultant Clinical Scientist, requiring the exercise of personal responsibility and taking largely autonomous initiative in complex and unpredictable situations;
- develop the knowledge, skills, experience, behaviours and attitudes required of a clinical leader in an evolving and rapidly developing health and life sciences sector.

Following a full tender and contracting process the doctoral programme will be provided by the Manchester Academy for Healthcare Science Education (MAHSE), a consortium of universities that will deliver the programme through partnership arrangements involving a range of organisations, including specialist professional bodies and/or MRCs. The doctoral programme will have three sections, reflecting the higher-level skills and requirements to support consultant-level practice:

- **Section A: Leadership and Professional Development** aligned to GSP, including leadership, professionalism, innovation, bio enterprise, teaching and learning, quality improvement, bioinformatics, health policy, human resource and business management, and research methods, although these areas are not necessarily exhaustive and others may be identified.
- **Section B: Specialist Scientific Clinical Programme** developed by the MRCs-led curriculum working groups of senior scientists and medical consultants, underpinned by supervised work-based and mentored training. This section will centre on the knowledge and understanding learning outcomes from the specialist scientific clinical syllabus for each HSST specialism, underpinned by supervised work-based and mentored training, reflective practice, experiential learning and a robust assessment system.
- **Section C: Research, Development and Innovation** that aims to improve health and health outcomes and may include scientific and/or clinical outcomes, service transformation, innovation, leadership, policy, education, or educational research.

Since a key purpose of the doctoral programme is to facilitate the opportunities for learning by Clinical Scientists in HSST by providing a structure within which they can obtain underpinning knowledge and learning to support their progression through the programme, it is not necessarily a requirement for the doctoral award itself to be obtained. The doctoral-level programme will be designed in a modular format, and although successful completion of the totality of the programme will lead to the award of a professional doctorate, it is not an essential requirement for all of those undertaking HSST programmes to obtain the doctoral award *per se*.

In the Life Sciences, for example, Clinical Scientists in HSST must obtain the FRCPATH, which includes the learning outcomes of the professional doctorate, but not necessarily obtain the award itself. In the Physiological Sciences, Medical Physics and Biomedical Engineering, and Clinical Bioinformatics, all Clinical Scientists in HSST will be expected to participate in the full professional doctorate programme (or potentially show equivalence to aspects of it) and gain the professional doctorate award. It will therefore be necessary for all Clinical Scientists in HSST to demonstrate that they have acquired the knowledge, skills and outcomes of the HSST curriculum to the required doctoral level in all the practice and academic elements of the programme. The doctoral-level award and programme will underpin

and support this, but in itself is not an end point of the HSST programme; nor is the award required for the demonstration of competence and fitness to practise. This will be defined within the HSST assessment strategy and in conjunction with the MRCs and the NSHCS.

## Research

Clinical Scientists in all HSST programmes will also be expected to undertake doctoral-level research, usually through the commissioned professional doctorate. Alternatively, research that demonstrates that such a level has been achieved may be offered, e.g. a coherent body of papers that reaches the standard suitable for publication in peer-reviewed journals, which has been undertaken during the HSST programme or during the three years before entry to the HSST programme. Clinical Scientists in HSST will also be encouraged to present and defend their research at national/international scientific conferences.

### 1.12 Models of Learning

HSST curricula will be delivered through work-based experiential learning and through achievement of the underpinning academic programme and/or its learning outcomes. The environment within the departments must therefore encourage independent self-directed learning and make opportunities for relevant off-the-job education by making provision for attendance at local, national and, where appropriate, international meetings and courses. It is the Clinical Scientist's responsibility, with the support of their educational supervisor and trainers, to seek learning and training opportunities and ensure that they access appropriate experiential learning. The training programme must allow for a significant component of clinical training and experience through service provision. This will normally be in the range of 30–80% of training time, depending on the specialism and the year of training.

It is therefore recognised that a large component of training will occur using an apprenticeship model of learning, under appropriate work-based supervision. Delivery of training must be under the supervision of a scientific or medical consultant and provide appropriate experiential content, including a broad exposure to both scientific and clinical issues. The environment within the department should encourage independent self-directed learning. The NSHCS will be responsible for the quality assurance of the work-based learning environment.

### 1.13 Learning Experiences

A wide range of teaching/learning opportunities/methods will be used during the programme to support the attainment of the learning outcomes and competences. However, it is part of the Clinical Scientist's professional development to seek out and organise relevant learning opportunities for themselves. In consultation with their educational supervisor, the Clinical Scientist in HSST may wish to consider organising some of the following learning events.

**Experiential or opportunistic learning** (learning through normal routine work experiences, learning by doing, observing, critical reflection), which will include:

- experiential working in the specialism, gaining practical and clinical skills, and observing, assisting and discussing aspects of practice with senior/consultant scientific and medical staff, patients and other members of the multi-professional team;
- task-specific, on-the-job training, working under consultant supervision and reflecting on and discussing experiences;
- observation of diagnostic/clinical/laboratory methods;
- tailored clinical experience, including team and directorate meetings in the specialty;
- attendance and participation at relevant organisational committees to enhance management and leadership skills;
- attending and participating in training provided through equipment and kit manufacturers;
- attending and participating in MDT meetings;
- teaching undergraduates and other health professionals;
- attending and participating in regional, national and international medical or scientific conferences;
- interaction with/attachment to specialist reference laboratories where required;
- completion of a doctoral-level research or innovation project from identification of the research question to dissemination of the output;

- contribution, as the leader or member of a team, to grant applications;
- dissemination of research findings through publications, presentations, etc.;
- attending and participating in medical clinics, including specialty clinics;
- gaining practical diagnostic experience;
- attending and participating in formal postgraduate education/teaching.

**Learning approaches**, which may include:

- independent self-directed learning;
- e-learning and m-learning (mobile learning);
- learning with peers;
- clinical skills teaching, including simulation;
- advanced library study, journal review;
- work-based experiential learning;
- small group teaching, lectures, tutorials;
- advanced journal clubs, audit meetings, etc.;
- service development projects.

#### **1.14 Completion of Training**

Successful completion of the HSST programme results in the award of a CCHSST by the NSHCS. The award will be made to Clinical Scientists in the Physical Sciences and Biomedical Engineering, the Physiological Sciences and Clinical Bioinformatics who complete the requirements of the work-based curriculum through work-based training, the ICS project and the professional doctorate, and who participate in the full training period (or as much as may be required if assessed by the AHCS as having done an equivalent period of training at some other point), including the final annual progression review/assessment, denoting satisfactory completion of the programme. In the Life Sciences, the CCHSST indicates achievement of the FRCPATH and the ICS project (which together meet the academic learning outcomes of the doctoral programme), although the doctoral-level award itself is not required. Clinical Scientists in HSST in the Life Sciences may, however, choose to undertake modules from the professional doctoral programme or, indeed, undertake the entire doctoral-level programme and achieve the DClinSci award.

The CCHSST indicates that the Clinical Scientist has achieved the standards set by the AHCS in order to gain entry to their HSS Register, having demonstrated the ability to lead, manage and critically evaluate services and practice, contributing to the team and individually to scientific, technological and service innovation. A Clinical Scientist on the HSS Register will be expected to maintain their professional development in line with GSP. It is anticipated that in due course, as for medical and surgical consultants, Consultant Clinical Scientists will undergo a regular process of revalidation that will be developed and overseen by the AHCS.

#### **1.15 Supervisory Arrangements**

##### ***Supervision and Feedback***

Supervision, support and mentoring for Clinical Scientists in HSST must be available to ensure safe and effective practice for patients and the public, and to support independent learning and high standards of professional conduct. Those undertaking a supervisory, training or mentoring role for Clinical Scientists in HSST programmes must have relevant professional qualifications and experience and have undertaken appropriate and up-to-date training as agreed by the NSHCS. The HEI providing the underpinning doctoral programme will also be expected to have an academic supervisory, support and mentoring scheme in place to support the academic programme.

Clinical Scientists in HSST must be appropriately mentored, supported and supervised by the senior scientific and medical staff on a day-to-day basis, under the direction of a designated educational supervisor. Educational supervision is a fundamental conduit for delivering teaching and training in the NHS. It takes advantage of the experience, knowledge and skills of educational supervisors/trainers and their familiarity with clinical and scientific situations. It ensures regular interactions between an experienced clinician and the Clinical Scientist in a HSST programme. This is the desired link between the past and the future of scientific practice, to guide and steer the learning process of the Clinical Scientist in the programme. Clinical supervision is also vital to ensure patient safety through providing Clinical Scientists in HSST with the support to deliver high-quality services to patients. It is therefore expected that Clinical Scientists in HSST programmes reaching the end of their training will also be able to demonstrate competence in clinical supervision before the award of the CCHSST.

Educational supervision should promote independent learning and reflective practice and support the Clinical Scientist in HSST to produce action plans to address identified learning needs. It will need to ensure that the Clinical Scientist learns specific higher skills and competences, helping them to develop self-sufficiency and self-awareness in the ongoing acquisition of skills and knowledge. At every stage, patient safety must be paramount. Supervision will also require the provision of pastoral care for some Clinical Scientists in HSST. Supervision during training will be undertaken by a range of appropriately trained healthcare professionals within and outwith healthcare science, e.g. consultant or senior medical staff, Clinical Scientists, research scientists, senior biomedical scientists, etc.

### ***The Educational Supervisor***

The educational supervisor will be an appropriately skilled senior scientist/clinician under whose direct supervision the Clinical Scientist in HSST is working. This person(s) will be responsible for monitoring, supporting and assessing the Clinical Scientist on a day-to-day basis in their scientific, clinical and professional work, and would usually be expected to take on the role of co-supervisor of the research project as part of the academic supervisory team.

To become an educational supervisor, a senior scientist or medical consultant must have consistently demonstrated an interest in and a commitment to teaching, learning, assessment and training, have appropriate access to teaching resources and be trained in the appropriate delivery of workplace-based assessments and learner-centred feedback in accordance with the MSC HSST assessment strategy. Educational supervisors must undertake appropriate training in educational principles and assessment (e.g. Training the Trainers programme, offered by the NSHCS in England or MRCs). Attainment of formal qualifications such as a postgraduate award in teaching, learning and assessment or an MSc in Medical/Clinical Education is desirable for some members of each supervisory team. Educational supervisors are expected to keep up to date with developments in training, have access to the support and advice of their senior colleagues regarding any issues related to teaching and training, and to keep up to date with their own professional development.

The role of the HSST educational supervisor therefore, with respect to the Clinical Scientist in HSST, includes responsibilities to:

- have overall educational and supervisory responsibility for the Clinical Scientist in HSST in a given post;
- ensure that they are familiar with the curriculum for each year/stage of training;
- ensure that they have appropriate day-to-day supervision appropriate to their stage of training;
- act as a mentor and help with both professional and personal development;
- ensure that they are making the necessary clinical and educational progress;
- ensure that they are aware of the assessment system and process;
- agree a training plan (formal educational contract) to make clear the commitment required to ensure that appropriate training opportunities are available;
- ensure that an induction (where appropriate) has been carried out soon after appointment to the HSST programme;
- discuss the training requirements and progress with other trainers with whom the Clinical Scientist in HSST spends a period of training;
- undertake regular formative/supportive appraisals (at least two per year, approximately every six months) and ensure that both parties agree to the outcome of these sessions and a written record is kept;

- regularly review the evidence submitted to the Online Learning and Assessment Tool (OLAT) so that they are aware of their progress and are encouraged to discuss any issues arising during training, ensuring that records of such discussions are kept;
- keep the NSHCS Professional Lead informed of any educational or pastoral issues that may affect the Clinical Scientist's ability to complete the HSST programme.

The process of gaining competence in supervision must start at an early stage in training, with the Clinical Scientist in HSST supervising more junior trainees, e.g. those undertaking STP. The example provided by the educational supervisor is the most powerful influence on the standards of conduct and practice of a Clinical Scientist in HSST.

### **Supporting Roles**

In addition to the educational supervisor who will have overall educational responsibility for the Clinical Scientist in HSST, there will be other clinical trainers and assessors who will help facilitate the provision of educational opportunities and feedback to the Clinical Scientist as required. They will also be in a position to provide evidence to support the educational supervisor's judgement about a Clinical Scientist's overall performance, competence and capability. Since Clinical Scientists in HSST will learn in a multi-professional environment, assessments will be carried out by a range of members of the team, including those who may not be scientifically or medically qualified. However, all those carrying out assessments must be appropriately qualified in the relevant professional specialism and trained in the methodology of workplace-based assessment, including the delivery of appropriate feedback. This does not apply to multisource feedback (MSF), where those contributing to the feedback will be from a wider pool. Clinical Scientists in HSST and their educational supervisors should look to identify opportunities to incorporate feedback from patients, where possible, in the assessment of competence.

### **1.16 The Assessment Programme**

The assessment programme for HSST is set within the context of the overall assessment strategy for MSC. A summary of the HSST strategy is set out in Table 1, and the detailed assessment programme for Clinical Scientists in HSST is shown in Table 2. Table 1 also shows the methods by which each component is assessed.

The HSST assessment programme is designed to capture evidence of the Clinical Scientist's mastery of the three main components of HSST, reflecting the five domains of GSP.

1. Clinical/scientific skills, and values, behaviours and attitudes relating to professionalism and the delivery of scientific/clinical services (Domains 1 and 3).
2. Scientific content (Domain 2).
3. Contribution to research, innovation and leadership in healthcare science (Domains 4 and 5).

The purpose of the assessment programme is to:

- provide evidence of satisfactory acquisition and application of knowledge, skills, experience and professionalism relevant to practice;
- enable each Clinical Scientist in HSST to demonstrate readiness to progress through the training programme and generate feedback to inform progress and learning needs;
- help to identify Clinical Scientists in HSST who may be in difficulty and who may need additional support;
- provide evidence to inform an annual progression review and the completion of the workplace-based assessment component of HSST;
- gather evidence that would assure the public that the Clinical Scientist in HSST is ready for independent professional practice as a Consultant Clinical Scientist.

### **Approach and Methods of Assessment**

Assessment for HSST is a blend of academic, professional and workplace-based assessments, which together provide evidence of the achievement of learning outcomes, clinical/scientific competence and the progression of the Clinical Scientist in HSST through to completion of training. All assessments are aligned to the curriculum and the domains of GSP. There are two routes through the HSST assessment programme to accommodate different requirements across the sciences: Route 1 is for Clinical Scientists in the Physiological Sciences, Physical Sciences and Biomedical Engineering, and Clinical Bioinformatics, and Route 2 is for Clinical Scientists in the Life Sciences. Table 1 shows that Clinical Scientists following Route 1 will complete assessments relating to the professional doctorate, an assessment of clinical skills, the workplace-based assessment programme and the ICS project. Clinical Scientists following Route 2 will be assessed through the Fellowship Examination of the Royal College of Pathologists (FRCPATH), the workplace-based assessment programme (with an option to take selected modules or the entire professional doctorate) and the ICS project.

### **Aim of the Innovation in Clinical Science Project**

The aim of the ICS project is to allow Clinical Scientists in HSST to demonstrate the achievement of the learning outcomes of the ICS set out below by:

1. conceiving an innovation<sup>2</sup> in healthcare science that has the potential to make a positive contribution to service delivery, patient experience, patient outcomes, health economics, or any other aspect of healthcare. The Clinical Scientist's innovation should be at doctoral level and therefore must be original and make a new contribution to knowledge. It must not draw directly from work they may have submitted previously as part of a Master's degree or PhD – although the ICS project may contribute to the HSST professional doctorate or FRCPATH dissertation;
2. undertaking a critical review of the literature considering relevant research in order to develop the rationale for the innovation;
3. undertaking a feasibility study, including consultation with stakeholder groups;
4. preparing and planning for implementation;
5. leading implementation and evaluation;
6. drawing realistic and evidence-based conclusions about the potential contribution and feasibility of the innovation.

### **Learning Outcomes from the ICS Project in the HSST Programme**

The ICS project represents one component of the overall assessment strategy for the HSST programme that must be passed in order to receive the Certificate of Completion of Higher Specialist Scientist Training (CCHSST) from the NSHCS. All Clinical Scientists in HSST (including those taking the FRCPATH route to completion of HSST) will need to complete the ICS. The project is designed to support the independent learning and demonstration of achievement of the following learning outcomes grouped under three areas, which reflect key components of the GSP syllabus as set out in the HSST curriculum.<sup>3</sup>

---

<sup>2</sup> Defined as 'An idea, service or product, new to the NHS or applied in a way that is new to the NHS, which significantly improves the quality of health and care wherever it is applied.' Improvement & Efficiency Directorate, Innovation and Service Improvement (2011, p9). *Innovation, Health and Wealth: Accelerating Adoption and Diffusion in the NHS*. Department of Health.

<sup>3</sup> The domains indicated in the table relate to the AHCS's *Good Scientific Practice* document (<http://ahcs.flinthosts.co.uk/wordpress/wp-content/uploads/2013/09/AHCS-Good-Scientific-Practice.pdf>). Within every HSST curriculum is the detailed GSP syllabus that contextualises GSP to the level and practice of the Clinical Scientist in HSST.

**Professionalism and Professional Development (Domain 1)**

By the end of the ICS project the Clinical Scientist in HSST will be able to demonstrate that they have:

- gained critical insight and professional understanding of the conceptual, ethical, value-based and analytical frameworks that underpin professional practice and their relationship to *Good Scientific Practice*;
- enhanced their skills and confidence to enable them to operate effectively and creatively within a healthcare science setting and the wider, diverse and changing healthcare environment.

**Leadership and Quality Improvement in the Clinical and Scientific Environment (Domains 1, 2 and 5)**

By the end of the ICS project the Clinical Scientist in HSST will be able to demonstrate that they have:

- broadened, built and applied their knowledge and skill base so that they are prepared for more senior, leadership roles within healthcare science and the wider healthcare environment where they will have responsibility as a future leader and team member for setting the policy, strategic direction, leadership and quality performance of their service and organisation to provide patient centred, high quality, compassionate patient treatment;
- led a quality improvement programme/s within their clinical environment, using the knowledge, skills and experience of organisational leadership which demonstrate the behaviours and attitudes described in the current frameworks and models of excellent leadership.

**Improving Outcomes for Health and Social Care (Domain 4)**

By the end of the ICS project the Clinical Scientist in HSST will be able to demonstrate that they have:

- built on and developed the knowledge, skills and experience of research and innovation methodology to demonstrate the high level skills required to undertake doctoral level research.
- the criticality to explain the process, barriers and enablers for publication and implementation of research and innovation findings.

**Overview of the ICS Project**

The innovation may be developed from work that the Clinical Scientist in HSST has submitted as part of the professional doctorate, or FRCPATH, or other HSST work, in consultation with their clinical supervisor. It is envisaged that completion of the ICS project will consist of the following stages.

- Stage 1**     *Conception:* identify innovation, literature review, refine innovation and rationale.
- Stage 2**     *Feasibility:* consultation with stakeholders, financial planning, implementation, plan, analysis of limitations and constraints.
- Stage 3**     *Pilot testing:* critical analysis and evaluation, reformulation of innovation.
- Stage 4**     *Assessment:* preparing for the ICS project assessment.

Clinical Scientists in HSST will not pass or fail the ICS project based on the success, or otherwise, of the innovation pilot alone, as it is recognised that innovations may succeed and fail due to factors that are outside the control of the Clinical Scientist. Similarly, it is recognised that Clinical Scientists are operating in a rapidly changing healthcare context and that the rationale for the innovation, or the innovation itself, may be superseded during the course of the project. The chief assessment criteria will therefore relate to the quality of the Clinical Scientist's insight into innovation and leadership in healthcare science, and the appropriateness of the conclusions drawn from their feasibility and pilot studies.

### **Annual Progression Review**

It is a shared responsibility between the Clinical Scientist, their educational supervisor and the NSHCS to monitor and review satisfactory completion of all assessments. At the end of each year there will be a formal progression process that will consist of a meeting between the Clinical Scientist in HSST and their educational supervisor (Annual Progress Review; APR), and a formal meeting of the Annual Progression Review Board (APRB). These two processes will be overseen by the NSHCS and will be the means by which eligibility to progress through the five-year programme will be judged. As a summary of the processes:

- the APR will be conducted by the educational supervisor, using documentation, guidance, criteria and standards that are common across specialisms. The purpose of the APR is to discuss the Clinical Scientist's experiences and perceptions of progress, and to scrutinise evidence of the Clinical Scientist's performance in the workplace to enable the educational supervisor to make a recommendation to the APRB about progression. This may include a recommendation that additional support is required. A progression recommendation will also take into account any issues regarding the completion of HSST in a non-linear way, including consideration of equality and diversity issues.
- an APRB meeting will be convened for each HSST specialism and will involve representation from the NSHCS, the relevant professional body/bodies, Consultant Clinical Scientists and a lay representative. The role of the Board will be to review the recommendations from educational supervisors, the assessment results and any additional feedback from the providers of the professional doctorate (Route 1) or FRCPATH (Route 2), the important value judgements made as part of MSF, and to complete a formal scrutiny of the evidence held on the OLAT. The purpose of the APRB is to ensure that the Clinical Scientist in HSST has demonstrated sufficient evidence of achieving the learning outcomes and competences appropriate to the stage of the programme, and to confirm progression to the next year of training. Where the APRB is not able to confirm progression, the NSHCS will, with the guidance of the APRB representatives and the Clinical Scientist's educational supervisor, facilitate the implementation of a remediation and support process or, exceptionally, a HSST exit support strategy (which would require a review of evidence that the remediation and support process had not achieved the outcomes as specified by the APRB).

**Table 1: Summary of HSST assessment strategy**

Programme component	Route <sup>1</sup>	Assessment components	Assessment tool/s	Administrative responsibility <sup>2</sup>	Component weighting
<b>Mastery of scientific content</b>	1	Professional doctorate (PD)	As required by the HEI provider of the PD	HEI	100%; must pass PD or FRCPATH to receive the Certificate of Completion for HSST from the NSHCS
	2	FRCPATH, with an option to take selected, or all, components of the PD <sup>3</sup>	FRCPATH	RCPATH	
<b>Mastery of clinical skills, values and behaviours</b>	1	Workplace-based assessment (WPBA)  Clinical skills assessment	Multiple WPBAs  OSFA/OSCSA <sup>4</sup>	Workplace, recorded on OLAT and monitored by NSHCS  NSHCS (in collaboration with Medical Royal Colleges [MRCs] & Professional Bodies [PBs])	100%; must have evidence of satisfactory completion of all WPBAs, and gain a 'Pass' in the OSFA/OSCSA or FRCPATH to receive Certificate of Completion for HSST from the NSHCS
	2	WPBA  FRCPATH	Multiple WPBAs  FRCPATH	Workplace, recorded on OLAT and monitored by NSHCS  RCPATH	
<b>Contribution to innovation, service improvement, patient safety or quality management in healthcare science</b>	1	Innovation in Clinical Science (ICS) project	Short report, plus presentation to multiprofessional panel	NSHCS to administer, in collaboration with MRCs and PBs	100%; must pass component to receive Certificate of Completion for HSST from the NSHCS
	2	Contribution to innovation, service improvement, patient safety, or quality management in healthcare science	Option to (1) complete as part of FRCPATH Part 2 (report and presentation to Penultimate Progression Review Board) <b>or</b> (2) complete ICS project as for non-Life Sciences <sup>5</sup>	(1) RCPATH <b>or</b> (2) NSHCS to administer, in collaboration with MRCs and PBs	

<sup>1</sup> Route 1 is for Clinical Scientists in the Physiological Sciences, Physical Sciences and Biomedical Engineering and Clinical Bioinformatics; Route 2 is for Clinical Scientists in the Life Sciences.

<sup>2</sup> Where assessments are created and delivered by the NSHCS's partners, the School will request access to data about the performance of these assessments, and data on individuals' assessment outcomes.

<sup>3</sup> Clinical Scientists taking the FRCPATH route through HSST have the option of completing any of the modules offered as part of the professional doctorate. However, in successfully completing the FRCPATH (and the ICS project, which may be part of the FRCPATH), the Clinical Scientist has demonstrated that they have achieved the learning outcomes of the professional doctorate.

<sup>4</sup> Work is ongoing to establish whether an OSFA (Objective Structured Final Assessment) or OSCSA (Objective Structured Clinical Skills Assessment) is the best fit to the assessment purpose.

<sup>5</sup> Clinical Scientists in Life Sciences who choose not to undertake the innovation component as part of FRCPath will be required to complete the ICS project, which will require the production of a short report and presentation to a multiprofessional panel.

**Table 2: HSST assessment road map for Life Sciences**

Stage	Year	Professional Doctorate	FRCPATH	Formative assessment	Summative assessment	Annual Progression Review (APR)/Annual Progression Review Board (APRB)	Completion
1	1	OPTIONAL; completion in part or whole to be determined by the CS in consultation with their educational supervisor	Part 1 <sup>3</sup>	As available for FRCPATH and in workplace	12 DOPS <sup>1</sup> ; 1 MSF; FRCPATH Part 1	APR, plus APRB <sup>2</sup>	APRB, to include completion of FRCPATH Part 1 if completing in Year 1
	2			As available for FRCPATH and in workplace	12 DOPS <sup>1</sup> ; 1 MSF; FRCPATH Part 1	APR, plus APRB <sup>2</sup>	APRB, to include completion of FRCPATH Part 1 if completing in Year 2
2	3		Part 2 <sup>3</sup>	As available for FRCPATH and in workplace	8 OCEs; 4 CBDs <sup>1</sup>	APR, plus APRB <sup>2</sup>	APRB
	4			As available for FRCPATH and in workplace, plus local assessment of contribution to innovation, service improvement, patient safety or quality management in healthcare science (to be completed as part of FRCPATH Part 2 <u>or</u> ICS project for non-Life Sciences)	8 OCEs; 4 CBDs <sup>1</sup> ; 1 MSF; Innovation contribution	APR, plus APRB <sup>3</sup>	APRB, including assessment of innovation as part of FRCPATH Part 2 or ICS project for non-Life Sciences
	5			As available for FRCPATH and in workplace	FRCPATH Part 2 exam; 1 MSF	Final Review Board (FRB) <sup>3</sup>	FRB, to include pass FRCPATH Part 2
<b>NSHCS awards the Certificate of Completion upon submission of evidence of successful completion of the WPBA programme, the FRCPATH, and innovation component (as part of FRCPATH or ICS project)</b>							

<sup>1</sup> The number of workplace-based assessments is indicative only; as is the scheduling of DOPS, CBDs and OCEs across Stages 1 and 2. There is no requirement to complete a minimum number of WPBAs, or any requirement to complete certain assessments at particular stages of the programme. Clinical Scientists in HSST should discuss and negotiate with their educational supervisor, as part of the development of the training plan, the type and number of assessments that will be most appropriate to demonstrate achievement of the learning outcomes.

<sup>2</sup> Criteria for progression to be determined in consultation with stakeholders.

<sup>3</sup> Clinical scientists taking FRCPATH should aim to take Part 1 during Year 1 or Year 2, and Part 2 during the remaining years.

### **The Online Learning and Assessment Tool (OLAT)**

Every Clinical Scientist in HSST will need to develop and maintain an electronic learning portfolio (e-portfolio) to document and provide evidence of their progress through the training programme. The framework for the e-portfolio will be the OLAT, which is provided by the NSHCS. The OLAT will enable the Clinical Scientist in HSST to record all workplace-based assessments, supervisors' reports, multisource feedback outcomes and reflections on their progress, learning experiences and participation in learning events, such as journal clubs and national and international conferences, etc. The OLAT is also designed to facilitate and encourage ongoing dialogue between the Clinical Scientist in HSST and their supervisor about the Clinical Scientist's personal and professional development at consultant-level practice. Clinical Scientists in HSST will be given access to OLAT upon enrolment.

### **Acknowledgements**

The curriculum was developed by the microbiology and virology curriculum committee: Dr Susan Murray, Dr Ken Mutton, Professor Armine Sefton, Dr Katherine Templeton, Dr Kathryn Rolfe, Dr Sheila Cameron, Dr Kirsty Dodgson, Dr Eleanor Kennedy and Dr Tim Wreghitt. It was circulated to various professional groups for comment including the RCPATH Lay Advisory Committee, Association for Clinical Biochemistry and the Institute of Biomedical Scientists.

## **GOOD SCIENTIFIC PRACTICE SYLLABUS: A COMMON COMPONENT OF ALL HSST CURRICULA**

This syllabus must be followed throughout the whole training period, with engagement at the appropriate level, depending on the stage of training.

The syllabus is divided into five domains. These align with the five domains of Good Scientific Practice:

- Domain 1: Professional Practice
- Domain 2: Scientific Practice
- Domain 3: Clinical Practice
- Domain 4: Research, Development and Innovation
- Domain 5: Clinical Leadership

Each domain contains an overall Learning Objective, which is described by a number of Competence statements. These are presented as:

- Knowledge to be acquired and applied
- Practical skills to be demonstrated
- Attitudes and behaviours to be consistently displayed

Each Competence statement is supported by indicative content. Cross referencing of the syllabus to the *Good Scientific Practice* standards is included.

**Modernising Scientific Careers: Higher Specialist Scientific Training: Good Scientific Practice Syllabus**

**Domain 1: Professional Practice**

Topic	Professional Practice	GSP Reference
<b>Learning Objective</b>	By the end of the training programme the HSS Trainee will be able to exercise personal responsibility and work largely autonomously taking the initiative in complex and unpredictable situations and performing a range of clinical/practical skills consistent with the roles and responsibilities of a Consultant Clinical Scientist.	
<b>Knowledge</b>	<p>By the end of the training period the HSS Trainee will be able to:</p> <ol style="list-style-type: none"> <li>1. Justify the importance of placing the patient at the centre of care and considering services from a user's point of view                             <ul style="list-style-type: none"> <li>• Compare and contrast models of promoting patient-centred care and how to ensure that the wishes, beliefs, concerns, expectations and needs of patients are respected.</li> <li>• Critique studies that demonstrate the benefits of patients sharing in decision making on their health.</li> <li>• Defend the rights of patients and carers to treatment without discrimination which includes age; gender; illness; disability; health inequality; cultural and social inequality; diversity.</li> <li>• Critique the evidence base, principles and practice of patient-centred interviewing and examination, including the patient perspective.</li> <li>• Explain and justify why it is important to develop and maintain appropriate patient-professional relationships and evaluate a range of situations which have had a positive and negative impact on those relationships.</li> <li>• Explain and justify why it is important to have a holistic approach to the patient, recognising that there may be social as well as medical aspects to their management.</li> <li>• Summarise local guidelines for responding to complaints from patients and/or carers and evaluate the impact of these systems in promoting patient centre care.</li> <li>• Recognise the importance of gathering and responding to patient derived data.</li> <li>• Summarise local guidelines for responding to unacceptable behaviour by patients, carers or relatives, including harassment, bullying or violence and identify the strengths and weaknesses of these guidelines.</li> <li>• Defend the importance of public engagement in science and its role in health and society.</li> </ul> </li> <li>2. Critically evaluate the important to keeping professional knowledge and skills up to date and work within the limits of personal competence                             <ul style="list-style-type: none"> <li>• Create, interpret and construct new knowledge of scientific, clinical and professional developments in area of practice.</li> <li>• Justify the rationale for engaging in continuing professional development and critical reflective practice and evaluate a range of methods for recording learning and developing and evaluating action plans.</li> <li>• Critique the evidence base underpinning continuing professional development with respect to the Consultant Clinical Scientist, the clinical service and the patient.</li> <li>• Recognise the limits of own competence and scope of practice in order to make informed and reasonable decisions.</li> <li>• Recognise the limits of competence and scope of practice for those for whom you are responsible and evaluate methods for managing difficult and sometimes unpredictable situations.</li> </ul> </li> </ol>	<p>1.1.1 1.1.9 1.1.10 1.2.1</p> <p>1.1.3 1.1.4 1.1.5 1.1.7 1.2.5 3.1.5 3.1.17</p>

Topic	Professional Practice	GSP Reference
	<ul style="list-style-type: none"> <li>• Critique methods for evaluating audit and review information on performance of self and those for whom you are responsible.</li> </ul> <p>3. Critique the ethical, legal and governance requirements arising from working at the level of Consultant Clinical Scientist across a range of complex situations</p> <ul style="list-style-type: none"> <li>• Evaluate the principles, guidance and law with respect to medical ethics; patient confidentiality; informed consent; equality and diversity; child protection; use of chaperones.</li> <li>• Justify the role of the Consultant Clinical Scientist in the definition and monitoring of compliance of standards of practice that are ethical and legal often involving complex issues.</li> <li>• Defend the purpose of clinical governance and the requirements of employing organisation.</li> <li>• Evaluate the role of clinical audit in demonstrating compliance with local governance requirements.</li> <li>• Evaluate the effectiveness of the Standards of Proficiency and Standards of Conduct, Performance and Ethics of the Health and Care Professions Council.</li> </ul> <p>4. Summarise and critique the evidence to support the high levels of probity required when working at the level of Consultant Clinical Scientist as a clinical leader</p> <ul style="list-style-type: none"> <li>• Evaluate the importance of verifying information in reports and documents, including research</li> <li>• Analyse and justify the Health and Care Professions Council Standards of Conduct Performance and Ethics</li> <li>• Appraise approaches to procedures for identifying and reporting critical incidents.</li> <li>• Appraise approaches to procedures for receiving and responding to complaints.</li> <li>• Summarise the procedures to follow if cautioned, charged with a criminal offence, suspended or have restrictions placed on personal scientific, clinical or professional practice.</li> </ul> <p>5. Appreciate the importance of personal health and wellbeing in order to ensure that personal performance and judgement is not affected by own health</p> <ul style="list-style-type: none"> <li>• Responsibilities to the public and how these may be compromised by poor health</li> <li>• Effects of stress on professional performance</li> <li>• Role and availability of occupational health and other support services</li> </ul> <p>6. Analyse NHS organisation, policy and practice as it affects the provision of healthcare, healthcare science and the patients and populations it serves</p> <ul style="list-style-type: none"> <li>• Justify the contribution the NHS makes to assuring the health of the nation.</li> <li>• Critically evaluate the structure of the NHS in the relevant jurisdiction of the UK, including Department of Health, Health Boards and Authorities Primary Care Trusts and Hospital Trusts and compare and contrast to alternative models of health delivery in Europe or Internationally.</li> <li>• Evaluate current national and local policy issues as they affect the service provided by Clinical Scientists and the healthcare science workforce.</li> <li>• Justify the role of population screening, shared care and self care in diagnosing and managing disease from the perspective of the patient and the healthcare provider.</li> </ul>	<p>1.1.3 1.2.5 3.1.1 3.1.2 3.1.3 3.1.17</p> <p>1.2.3 1.2.4 1.2.5</p> <p>1.1.8 1.1.9 1.2.2</p> <p>1.1.3 3.1.3</p>

Topic	Professional Practice	GSP Reference
	<ul style="list-style-type: none"> <li>• Identify and explain the finance issues facing providers of healthcare at national and local level in general, especially budgetary management and commissioning and the effect on healthcare provision.</li> <li>• Evaluate the effectiveness of the role of central government health regulatory and quality improvement agencies across the devolved NHS.</li> <li>• Explain and analyse the roles and relationships of Health Education England (and equivalents elsewhere in the UK); Modernising Scientific Careers; Academy for Healthcare Science; National School of Healthcare Science; Council of Healthcare Science in Higher Education, Medical Royal Colleges; specialist societies; postgraduate deans and deaneries and patient organisations in the provision of healthcare science.</li> <li>• Summarise the management structure and key contacts of the employing organisation (including chief executive, medical directors, clinical directors) and evaluate the structure with respect to providing high quality patient care.</li> <li>• Summarise the management structure of and key contacts with relevant major service users and providers and the contribution to the provision of high quality patient care.</li> </ul> <p>7. Discuss theories of teaching and learning to underpin the role of the healthcare scientists in education as a teacher or trainer, according to the best contemporary clinical and educational standards.</p> <ul style="list-style-type: none"> <li>• Critically review the evidence base and apply knowledge of teaching, learning and assessment within the clinical and scientific work base to design, deliver and evaluate education and training programmes that meet the best clinical and educational standards.</li> </ul>	<p>1.4.1 1.4.2</p>
<p><b>Practical Skills</b></p>	<p>By the end of the training period HSS Trainees would be expected to apply in practice a range of clinical skills and critically reflect on their performance and will be able to:</p> <ol style="list-style-type: none"> <li>1. Critically apply their understanding of professional practice with conduct that places the patient at the centre of care in a manner that promotes patient well-being and self-care through: <ul style="list-style-type: none"> <li>• Developing and maintaining appropriate patient-professional relationships in practice.</li> <li>• Working with patients and carers in a respectful and non-discriminatory manner.</li> <li>• Taking a clinical history and using the information as part of the clinical decision making process.</li> <li>• Performing a range of clinical examination skills relevant to healthcare science practice.</li> <li>• In the context of patient-centred care giving and receiving feedback sensitively to or from a peer or colleague using an appropriate feedback model.</li> </ul> </li> <li>2. Critically apply their understanding of the role and importance of continuing professional development to ensure that professional knowledge and skills are being kept up to date through: <ul style="list-style-type: none"> <li>• Maintaining personal records of continuing professional development providing evidence of critical reflection including action planning with respect to clinical practice and professional development in a form suitable for audit by a professional body or regulator and demonstrate continuing fitness to practise.</li> <li>• Recording critical reflective notes justifying how participation in continuing professional development has contributed to learning and led to improvements in personal and service performance.</li> <li>• Monitoring own performance by evaluating the outcome of audit and feedback from a range of sources.</li> </ul> </li> </ol>	<p>1.1.2 1.1.10 1.1.11 3.1.10 3.1.11</p> <p>1.1.4 1.1.5 3.1.5</p>

Topic	Professional Practice	GSP Reference
	<ul style="list-style-type: none"> <li>• Encouraging a culture in which innovation and developments are identified, discussed, evaluated and potentially introduced to improve service delivery.</li> <li>• Encouraging staff and colleagues to recognise learning opportunities in the work place and where necessary supporting them to obtain and use study leave to participate and contribute to additional learning experiences including skills training courses and conferences.</li> </ul> <p>3. Respond to the ethical, legal and governance requirements arising from working at the level of Consultant Clinical Scientist critical applying accrued knowledge and evidence by:</p> <ul style="list-style-type: none"> <li>• Recognising the factors influencing ethical decision making, including religion, personal and moral beliefs, cultural practices making informed decisions and supporting colleagues.</li> <li>• Justifying the use and sharing of information in accordance with the regulations, encouraging such behaviour in other members of the healthcare team and taking action where breaches of the guidelines make have occurred.</li> <li>• Justifying the use and promotion of strategies to ensure confidentiality is maintained e.g. removal of patient names where appropriate reviewing and analysing published literature and considering the impact of such measures on the clinical service.</li> <li>• Recognising the problems posed by disclosure in the public interest, without consent of the patient</li> <li>• Ensuring patients, relatives and carers are aware of the need for information distribution within members of the immediate healthcare team.</li> <li>• Using appropriate methods of ethical reasoning to justify a decision where complex and conflicting issues are involved.</li> <li>• Perform and evaluate clinical audit to assess compliance with local governance requirements. Take remedial action as required.</li> </ul> <p>4. At all times act in a manner that demonstrates probity in all aspects of professional practice by:</p> <ul style="list-style-type: none"> <li>• Working in accordance with good scientific practice with conduct that at all times justifies the trust of patients and colleagues and that maintains public trust in healthcare science.</li> <li>• Writing honest and accurate reports and signing documents appropriately.</li> <li>• Applying honesty and accuracy about personal qualifications, experience and position in the scientific community.</li> <li>• Acting honesty with respect to written and verbal information provided to any formal or legal enquiry, including recognition of the limits of scientific knowledge and experience.</li> <li>• Creating and justifying open and non-discriminatory professional working relationships with colleagues and using critical reflection to review personal behaviour and response to challenging issues.</li> <li>• Responding in an open, constructive and timely manner to critical incidents or complaints about own or team performance influencing the response and using critical reflection to review personal behaviour and response to challenging issues.</li> <li>• Taking appropriate action if you suspect you or a colleague may not be fit to practise putting patient safety at the forefront of your practice.</li> <li>• Practising within the Health and Care Professions Council Standards of Conduct, Performance and Ethics.</li> </ul> <p>5. Make appropriate judgements to ensure you limit your work or stop practising if performance or judgement is affected by your health by:</p>	<p>1.1.11 3.1.1 3.1.2 3.1.17</p> <p>1.1.8 1.2.2 1.2.3 1.2.4 1.2.5 5.1.3</p> <p>1.1.8</p>

Topic	Professional Practice	GSP Reference
	<ul style="list-style-type: none"> <li>• Recognising when personal health takes priority over work pressures, seeking appropriate advice and support and taking appropriate action.</li> <li>• Developing and maintaining appropriate coping mechanisms for a range of potential issues including stress seeking help if appropriate and evaluating the impact of an intervention.</li> </ul> <p>6. Demonstrate professional practice that is consistent with relevant current NHS policy and practice by:</p> <ul style="list-style-type: none"> <li>• Identifying and evaluating existing and new NHS policy and advice that are relevant to the area of practice and the implications of these for personal and team practice and the impact on patients.</li> <li>• Using a range of communication skills to lead and contribute to discussions and gain agreement in a range of situations, including within the multidisciplinary team and steps that need to be taken to align service delivery with the most recent NHS policy and advice.</li> <li>• Sharing information and advice with peers in order to encourage a consistent approach to the implementation of NHS policy and advice.</li> <li>• Evaluating, documenting and justifying any local decisions that are taken that mean that it is not possible to align service delivery with NHS policy and advice.</li> </ul> <p>7. Contribute to the education and training of colleagues planning, delivering and evaluating teaching on the basis of student and peer feedback and active self reflection</p> <ul style="list-style-type: none"> <li>• Use a range of teaching methods including lecture based, small group teaching and practical skills teaching appropriate to the learners.</li> <li>• Plan, deliver and evaluate a range of assessments appropriate to learning outcomes in the three domains of learning.</li> </ul>	<p>1.1.11</p> <p>1.1.4 1.3.1 2.1.1 2.1.6</p> <p>1.4.1 1.4.2</p>
<b>Attitudes and Behaviours</b>	<p>By the end of the training period HSS Trainees would be expected to demonstrate the attitudes and behaviours necessary for the role of a Consultant Clinical Scientist and will be able to:</p> <p>1. Apply evidence based personal and team professional practice that places the patient at the centre of care</p> <ul style="list-style-type: none"> <li>• Act in accordance with the principles and practice of patient-centred care, regularly reflecting on personal practice and revising judgments and changing behaviour in the light of new evidence.</li> <li>• Critically assess and evaluate personal and team related performance in the context of evidence based patient care identify areas of good practice and make improvements where necessary.</li> <li>• Seek and critically appraise feedback from patients on own and team performance and adapt practice accordingly.</li> </ul> <p>2. Apply knowledge, experience and deep reflection to identify personal development needs using a range of tools and develop and update action plans to ensure support continuing professional development</p> <ul style="list-style-type: none"> <li>• Apply the skills of deep reflection to identify personal development needs to transform and maintain up to date practice.</li> <li>• Act as a self-motivated professional scientist being willing to learn from self and others responding positively to constructive and meaningful feedback.</li> <li>• Create a culture which values continuing professional development to enable staff under supervision and supports them in recognising their strengths and identifying areas for improvement.</li> </ul>	<p>1.1.9 1.1.10 1.1.11</p> <p>1.1.4 1.1.11 1.3.1 1.3.6</p>

Topic	Professional Practice	GSP Reference
	<p>3. Display a professional commitment to ethical practice consistently operating within national and local ethical, legal and governance requirements</p> <ul style="list-style-type: none"> <li>• Accept professional ethical standards and encourages informed debate and critical reflection within healthcare teams.</li> <li>• Seek advice of peers, legal bodies and regulators in the event of ethical dilemmas in areas including disclosure and confidentiality.</li> <li>• Respect requests from patients that information should not be shared unless this puts the patient or others at risk of harm.</li> <li>• Share information about patient care with the patient unless they have expressed a wish not to receive such information.</li> </ul> <p>4. Apply the principles of <i>Good Scientific Practice</i> and the professional standards performing to the highest standards of personal behaviour in all aspects of professional practice</p> <ul style="list-style-type: none"> <li>• Recognise the importance of leading by example in setting high standards of personal behaviour, and in acting with openness, fairness and integrity listening to the views of others.</li> <li>• Accept the requirements for professional regulation.</li> <li>• Promote professional attitudes and values at all times.</li> <li>• Recognise the need to be truthful and to admit and learn from errors.</li> <li>• Accept the requirement to inform the statutory regulator if cautioned, charged with a criminal offence, suspended or have restrictions placed on personal scientific, clinical or professional practice.</li> </ul> <p>5. Consistently operate in accordance with relevant current NHS policy and practice</p> <ul style="list-style-type: none"> <li>• Recognise the need to identify and assess the implications of NHS policy and advice for service organisation and delivery of high quality services.</li> <li>• Consult with peers and service users as part of obtaining agreement to align services with NHS policy and advice.</li> </ul>	<p>1.1.11 1.2.1</p> <p>1.1.3 1.1.8 1.1.9 1.1.11 1.2.2</p> <p>1.1.3 1.3.1</p>

**Domain 2: Scientific Practice**

Topic	Scientific Practice	GSP Reference
<b>Learning Objective</b>	By the end of this stage of training HSS Trainees will be able to assess, plan, deliver and evaluate high quality scientific services in a safe and secure working environment.	
<b>Knowledge</b>	<p>By the end of the training period HSS Trainees will be able to:</p> <ol style="list-style-type: none"> <li>1. Analyse the strengths and weaknesses of current and new scientific investigations and methods used in the diagnosis, monitoring and treatment of clinical disorders relevant to area of practice                             <ul style="list-style-type: none"> <li>• Evaluate the scientific basis of investigations and procedures.</li> <li>• Discuss the impact of genomics and personalised medicine on health and healthcare science.</li> <li>• Discuss the impact of clinical bioinformatics on health and healthcare science.</li> <li>• Critique the application of scientific investigations and procedures in protocols and patient pathways.</li> <li>• Summarise the strengths and weaknesses of current service provision both in terms of performance characteristics and clinical application.</li> <li>• Compare alternative approaches and/or improvements to investigations and procedures.</li> <li>• Use scientific principles and reasoning to assess, plan and design new or improved investigations or procedures.</li> <li>• Analyse the role of peer opinion in refining ideas and plans.</li> <li>• Evaluate new and emerging technologies and their potential to improve healthcare and healthcare science.</li> </ul> </li> <li>2. Critique the application of evidence-based practice to the optimisation of scientific investigations and methods                             <ul style="list-style-type: none"> <li>• Summarise and critically review the scientific literature in area of expertise.</li> <li>• Evaluate the principles and practice of evidence-based medicine relevant to area of practice.</li> <li>• Appraise approaches to meta-analyses, systematic reviews, clinical trials, cohort studies and related approaches used in this field.</li> <li>• Critique methods for searching, identifying, ranking and evaluating scientific evidence.</li> <li>• Justify the rationale for the use of methods to evaluate and optimise the performance of scientific investigations.</li> <li>• Defend methods for comparing performance of two or more scientific investigations or procedures.</li> <li>• Appraise relevant statistical measures applied to research publications.</li> </ul> </li> <li>3. Evaluate and apply information and communication technology to facilitate service delivery and development in relevant areas of healthcare science                             <ul style="list-style-type: none"> <li>• Justify the application of information and communication technology in area of practice.</li> <li>• Evaluate the impact and development of bioinformatics on the practice of health care and healthcare science.</li> <li>• Discuss the requirement for data confidentiality, security and protection.</li> <li>• Evaluate the function and operation of the Hospital Information System.</li> <li>• Evaluate and justify the function and operation of linked information systems (e.g. Laboratory Information System) and</li> </ul> </li> </ol>	<p>2.1.1 2.1.3</p> <p>1.1.5 2.1.1</p> <p>2.2.9</p>

Topic	Scientific Practice	GSP Reference
	<p>middleware linking equipment to information systems.</p> <ul style="list-style-type: none"> <li>• Identify the benefits and barriers with respect to personal computer hardware and software.</li> <li>• Appraise the appropriate use of electronic mail and social networking technology in the context of professional role.</li> <li>• Summarise how electronic literature searching (e.g. PubMed) and storage can be used within the clinical environment.</li> <li>• Access and judge specialist websites and databases relevant to professional role.</li> <li>• Appraise the range of statistical packages relevant to area of expertise, including bioinformatics where appropriate.</li> </ul> <p>4. Justify the principles and practice of quality control, external quality assessment and quality management as applied to relevant areas of healthcare science</p> <ul style="list-style-type: none"> <li>• Evaluate the purpose and operational requirements of internal quality control and external quality assessment and defend the systems currently in place.</li> <li>• Defend the principles and practice of quality management and, where appropriate, service accreditation.</li> <li>• Critique the required quality standards and monitoring of performance against those standards and the contribution standards make to the provision of a high quality service.</li> </ul> <p>5. Justify the role of audit and the audit cycle and explain how it is used as a tool to facilitate continuous quality improvement</p> <ul style="list-style-type: none"> <li>• Evaluate the principles and practice of scientific and technical audit including examples of audit improving practice.</li> <li>• Identify aspects of service delivery that should be subjected to regular scientific or technical audit and justify the selection.</li> <li>• Appraise audit reports including recommendations for improvement and the impact on the service when implemented.</li> <li>• Critically review examples of relevant scientific and technical audits performed locally or elsewhere and the impact on service delivery.</li> </ul> <p>6. Summarise and interpret health and safety legislation and guidance for the workplace</p> <ul style="list-style-type: none"> <li>• Defend the importance of health and safety within the workplace with respect employees, employers, patients and the public.</li> <li>• Appraise current legislation and guidelines relating to health and safety in the workplace including, as appropriate to role, biological specimen handling; COSHH; RIDDOR; radioactivity; fire safety; electrical safety; moving and handling; display screen equipment.</li> <li>• Justify local health and safety guidance.</li> <li>• Justify the principles and practice of infection control including the impact of reducing infection rates on patients.</li> <li>• Critically review procedures involved in risk assessment and risk management and the impact on quality and safety.</li> <li>• Summarise the policy and procedures associated with critical incident reporting and the impact on service improvement and the culture of the organisation.</li> </ul>	<p>2.3.1 2.3.2</p> <p>2.2.2 2.3.4 3.1.17</p> <p>2.2.6 2.2.7 2.2.8</p>
<p><b>Practical Skills</b></p>	<p>By the end of the training period HSS Trainees would be expected to apply in practice a range of clinical skills and critically reflect on their performance and will be able to:</p> <p>1. Develop and evaluate investigative strategies/procedures/processes that take account of relevant clinical and scientific evidence and other sources of information</p> <ul style="list-style-type: none"> <li>• Critically appraise the scientific credentials and validity of existing investigations and procedures.</li> </ul>	<p>2.1.1 2.1.3 2.2.2</p>

Topic	Scientific Practice	GSP Reference
	<ul style="list-style-type: none"> <li>• Critically appraise the way in which scientific investigations and procedures are used in strategies and protocols for the diagnosis, monitoring and treatment of defined clinical disorders.</li> <li>• Work in partnership with peers and service users apply scientific principles and reasoning to plan, develop and assess the scientific validity and clinical effectiveness of new or improved investigations, procedures, strategies or protocols.</li> </ul> <p>2. Critique the selection and application in practice of scientific investigations in defined clinical situations using quantitative and/or qualitative methods</p> <ul style="list-style-type: none"> <li>• Reflect on proficiency in the performance of routine and non-routine scientific and technical procedures used in defined clinical areas of service and develop action plans to improve performance.</li> <li>• Compare own proficiency with experts in the technical validation of data derived from scientific and technical procedures.</li> <li>• Justify the selection and application of scientific and technical procedures to comply with clinical requests and evaluate the efficacy of this n own practice.</li> <li>• Apply the principles and practice of evidence-based medicine to critically appraise the effectiveness of scientific and technical investigations and procedures.</li> <li>• Use and evaluate statistical measures such as likelihood ratio, AUC-ROC, number needed to treat/harm.</li> </ul> <p>3. Master the use of information and communication technology in relevant areas of healthcare science</p> <ul style="list-style-type: none"> <li>• Use information and communication technology for all applications in area of practice.</li> <li>• Justify the rationale and conform to requirements for data confidentiality, protection and security.</li> <li>• Use and apply the Hospital Information System; appropriate linked information systems; middleware and instrumentation hardware and software.</li> <li>• Master the use of personal computers and relevant programmes including word processing; databases; PowerPoint; internet and electronic mail; electronic literature searching and storage.</li> <li>• Use relevant statistical packages for data handling including methods for assessing clinical effectiveness and, where appropriate, basic bioinformatics and interpret the results/outcomes.</li> </ul> <p>4. Set, apply and maintain quality standards and related quality control, assessment and management techniques to assure the validity of scientific and technical investigations adapting and developing systems as required</p> <ul style="list-style-type: none"> <li>• Critically appraise relevant internal quality control and external quality assessment data and draw conclusions about quality performance.</li> <li>• Present and actively participate in meetings that review quality performance criteria justifying and defending solutions for improvement and adapting and implementing corrective action as required.</li> <li>• Contribute to quality management justifying the definition of standards and monitoring of performance against those standards adapting and developing systems as required.</li> <li>• Prepare and review regular quality management reports including, where appropriate, linkage with service accreditation adapting and developing systems as required.</li> </ul> <p>5. Perform scientific and technical audit to determine that investigations and methods are fit for purpose justifying and monitoring the</p>	<p>2.1.2 2.1.3 2.1.4 2.2.1 2.2.3 2.2.4 2.2.5</p> <p>2.2.9</p> <p>2.1.6 2.3.1 2.3.2 2.3.3</p> <p>2.2.2</p>

	<p>research and development programme and adherence to the data archive process and requirement to provide access to the data for regulatory inspections.</p> <p>3. Critically appraise the results of a research and development project, draw conclusions in the correct clinical context, and, where appropriate, use them to plan follow up research and development</p> <ul style="list-style-type: none"> <li>• Select type and range of data to be collected in line with research plan, including primary and secondary sources.</li> <li>• Ensure that records comply with relevant legal, ethical and organisational requirements.</li> <li>• Ensure that records of research data are complete and accurate.</li> <li>• Assess the research information collected for its validity and reliability.</li> <li>• Select techniques of analysis and evaluation which are valid, reliable and appropriate to the research design and purpose.</li> <li>• Collate, record and analyse information accurately to produce justifiable results.</li> <li>• Verify the analysis using accepted and valid techniques including statistical tests.</li> <li>• Assess the results of research against the original objectives.</li> <li>• Assess the clinical significance and impact of the research.</li> <li>• Investigate reasons where the research has failed to achieve its objectives and provide clear explanation.</li> <li>• Draw conclusions drawn from results and explain the rationale for those conclusions.</li> </ul> <p>4. Report and communicate research, development or innovation to peers and other interested parties including patients and service users</p> <ul style="list-style-type: none"> <li>• Report and endeavour to publish all research, including negative findings.</li> <li>• Define the key purpose and objectives of the research programme and match results to these objectives.</li> <li>• Produce findings in format appropriate to purpose, and in line with relevant legal, ethical and organisational requirements.</li> <li>• Record accurately issues of copyright, declaration of interest and intellectual property rights.</li> <li>• Present findings in a format, language and style suitable for the target audience.</li> <li>• Include all relevant bibliographic references in line with current conventions.</li> <li>• Make a clear distinction between the results and the interpretation placed upon them.</li> <li>• Support the presentation with sufficient information to clarify key points.</li> <li>• Support presentation conclusions with reasoned argument and sufficient evidence.</li> <li>• Make recommendations, which are realistic, relevant and clearly defined.</li> <li>• Acknowledge collaborators, contributors and funding sources.</li> <li>• Effectively respond to questions and critical comments.</li> <li>• Observe time limitations for oral presentations and deadlines for written presentations.</li> </ul> <p>5. Translate research findings or innovation solutions into service and provide examples of where this has been achieved</p> <ul style="list-style-type: none"> <li>• Realign research findings or innovative approaches to create a service development or change plan</li> <li>• Assess impact of research on innovation in service design and delivery</li> <li>• Complete pilot and field studies in line with plan</li> <li>• Identify and report potential risks associated with the conduct of pilot and field studies</li> </ul>	<p>4.1.5 4.1.6 4.1.7 4.1.10</p> <p>4.1.9 4.1.10</p> <p>4.1.5 4.1.10</p>

Topic	Research, Development and Innovation	GSP Reference
	<ul style="list-style-type: none"> <li>• Maintain records of all pilot and field studies in accordance with the plan</li> <li>• Present documentation and provide verbal feedback as required by the plan</li> <li>• Document and report any unexpected outcomes or incidents</li> <li>• Report any delays or problems experienced to authorised personnel with relevant degree of urgency.</li> <li>• Report on cost-benefit analysis of implementation.</li> </ul>	
<b>Attitudes and Behaviours</b>	<p>By the end of the training period HSS Trainees would be expected to demonstrate the attitudes and behaviours necessary for the role of a Consultant Clinical Scientist and will be able to:</p> <ol style="list-style-type: none"> <li>1. Evaluate current debates and information and identify opportunities for research, development and innovation identifying and solving problems.                             <ul style="list-style-type: none"> <li>• Appreciate the impact of current clinical outcomes on patients and carers in research area.</li> <li>• Accept the need to mitigate factors that limit current clinical outcomes and patient experience in research area.</li> <li>• Explore areas of clinical practice where significant improvements could contribute to better clinical outcomes and/or patient experience.</li> <li>• Recognise the opportunities for innovation in service design and/or delivery.</li> <li>• Use examples from the literature and own experience where research, development and innovation has contributed to better clinical outcomes and/or patient experience.</li> </ul> </li> <li>2. Apply rigorous standards to the conduct of research, development and innovation                             <ul style="list-style-type: none"> <li>• Adhere to, and accept and work within current research ethics and research governance requirements applicable within organisation raising concerns when necessary.</li> <li>• Promote methods for defining and demonstrating compliance with relevant research ethics and research governance requirements.</li> <li>• Adhere to and accept methods for external assessment of compliance with research ethics and research governance requirements and learn from the process.</li> <li>• Critically reflect on and use examples of problems encountered by others when compliance with research ethics and research governance requirements was inadequate and apply learning to all aspects of research, development and innovation.</li> </ul> </li> <li>3. Commit to and lead collaborative research in the interests of improving clinical outcomes and/or patient experience                             <ul style="list-style-type: none"> <li>• Accept and value the knowledge and experience that each research collaborator can bring to the planning, implementation and evaluation of a research project listening to, and evaluating the views of others.</li> <li>• Promote the importance of the multidisciplinary clinical team in setting practice standards and in auditing outcome against those standards.</li> <li>• Identify and promote the benefits to own specialism by being a partner in collaborative research.</li> <li>• Leadership to give examples of good clinical practice deriving from a collaborative approach to research and development.</li> </ul> </li> <li>4. Commit to sharing and disseminating research findings and the outcome and learning from innovation projects with peers                             <ul style="list-style-type: none"> <li>• Accept the benefits and constraints of patents and confidentiality in research outcomes and innovation opportunities.</li> </ul> </li> </ol>	<p>4.1.1 4.1.2</p> <p>4.1.4</p> <p>4.1.3 4.1.10</p> <p>4.1.6</p>

**Domain 5: Clinical Leadership**

Topic	Clinical Leadership	GSP Reference
<b>Learning Objective</b>	By the end of this stage of training, HSS Trainees will be able to critically appraise the evidence base underpinning clinical leadership frameworks and operate as a clinical leader involved in the planning, delivery and transformation of health and social care services.	
<b>Knowledge</b>	<p>By the end of the training period HSS Trainees will be able to:</p> <ol style="list-style-type: none"> <li>1. Evaluate the personal qualities required of a clinical leader and critically reflect on performance to identify his/her own personal qualities, including values, principles and assumptions developing action plans to adapt personal behaviour as necessary                             <ul style="list-style-type: none"> <li>• Critically appraise models of leadership including the shared or distributed model for organisations where tasks are more complex and highly interdependent.</li> <li>• Evaluate a range of tools that enable exploration of the ways in which individual behaviours impact on others.</li> <li>• Evaluate a range of feedback models to obtain and respond to feedback from others.</li> <li>• Review and justify the use of a range of tools and techniques for managing stress including occupational health and other support networks.</li> <li>• The importance of best practice, transparency and consistency.</li> <li>• Summarises the professional, legal and ethical codes of the Health and Care Professions Council and other relevant bodies.</li> <li>• Evaluate a range of tools to identify personal preferences and prejudices and those within others, society and cultures.</li> </ul> </li> <li>2. Evaluate the importance of working with others in teams and networks to deliver and improve services                             <ul style="list-style-type: none"> <li>• Discuss the role of team dynamics in the way a group, team or department functions.</li> <li>• Evaluate a range of team structures and the structure, roles and responsibilities of the multidisciplinary teams within the broader health context relevant to the specialism, including other agencies and the impact of different structures on the delivery of care.</li> <li>• Critique a range of techniques and methods that facilitate effective and empathic communication and the evidence base underpinning them</li> <li>• Evaluate a range of models to facilitate conflict resolution</li> <li>• Critically explore a range of leadership styles and approaches and identify the applicability, strengths and weakness of each to different situations and people</li> </ul> </li> <li>3. Critically evaluate methods by which services may be planned and people and resources managed effectively                             <ul style="list-style-type: none"> <li>• Summarise the structure, financing and operation of the NHS and its constituent organisations and compare this to other systems of healthcare.</li> <li>• Ethical and equality aspects relating to management and leadership e.g. approaches to use of resources/rationing; approaches to involving services users in decision making.</li> <li>• Discuss business management principles: priority setting and basic understanding of how to produce a business plan.</li> <li>• Identify the requirements of running a department, unit or practice relevant to the specialism.</li> <li>• Justify the allocation of funding to scientific services and evaluate how clinical resources to provide high quality care should be allocated considering the financial constraints of the NHS and local organisations.</li> </ul> </li> </ol>	<p>1.1.2 1.1.3 1.1.5 1.1.6 1.1.7 5.1.1</p> <p>1.3.1 1.3.2 1.3.5 5.1.2 5.1.4 5.1.5 5.1.7</p> <p>5.1.1 5.1.6</p>

Topic	Clinical Leadership	GSP Reference
	<ul style="list-style-type: none"> <li>• Summarise the commissioning, funding and contracting arrangements relevant to the specialism including education, training and continuing professional development.</li> <li>• Critique relevant legislation (e.g. Equality and Diversity, Health &amp; Safety, Employment Law) and local Human Resources policies and the impact of these policies on people and the organisation.</li> <li>• Discuss the duties rights and responsibilities of an employer, and of a co-worker.</li> <li>• Justify the role of individual performance review considering its purpose, techniques and processes, including the difference between appraisal, assessment and revalidation.</li> <li>• Compare and contrast methods to measure and manage the performance of the organisation.</li> <li>• Analyse the source of complaints, and review and reflect on how complaints are managed and the learning that is fed back into the organisation to improve the patient and staff experience.</li> </ul> <p>4. Critically evaluate how clinical leadership can support the delivery of high quality services and by service improvements and the methods by which it may be achieved delivering high quality services and by developing improvements to service.</p> <ul style="list-style-type: none"> <li>• Evaluate risk management issues pertinent to the area of practice and wider organisation identifying potential sources of risk and risk management tools, techniques and protocols.</li> <li>• Summarise how healthcare governance influences patient care, research, innovation and educational activities at local regional and national level.</li> <li>• Summarise key government reports on maintaining professional standards and discuss the mechanism for raising issues where you consider that standards are being compromised ('whistleblowing') .</li> <li>• Appraise quality improvement methodologies including a range of methods obtaining feedback from users, staff, patients and the public and explore the impact on patients, services and the organisation.</li> <li>• Discuss the principles and processes of evaluation, audit, research, and development, innovation, clinical guidelines and standard setting in improving quality and identify barriers to the adoption and success of each measure in practice.</li> <li>• Identify a variety of methodologies for developing creative solutions to improving services.</li> <li>• Explore the implications of change on systems and people and methods to minimise the negative effects of change including strategies for motivating people to change, the effect of organisational culture.</li> <li>• Describe project management methodology and how it can be used during change.</li> </ul> <p>5. Justify the importance of strategic planning in line with the aspirations of the organisation</p> <ul style="list-style-type: none"> <li>• Summarise the responsibilities of the various Executive Board members and Clinical Directors or leaders.</li> <li>• Summarise the functions and responsibilities of national bodies such as department of Health, Care Quality Commission, NHS Evidence, National Patient Safety Agency, Medicines and Healthcare products Regulatory Agency, Royal Colleges and faculties, specialty organisations, representative bodies, regulatory bodies, educational and training organisations.</li> <li>• Analyse patient outcome reporting systems within the specialism, and the organisation and how these relate to national programmes.</li> <li>• Summarise how research, development and innovation contribute to strategic planning.</li> <li>• Critically review the decision making for individuals, teams and the organisation and the impact on service delivery and patient care.</li> </ul>	<p>1.1.12</p> <p>2.2.2</p> <p>2.3.2</p> <p>2.3.2</p> <p>2.3.3</p> <p>2.3.4</p> <p>3.1.17</p> <p>5.1.8</p> <p>5.1.10</p> <p>5.1.11</p> <p>1.3.1</p> <p>1.3.3</p> <p>5.1.1</p> <p>5.1.6</p> <p>5.1.12</p>

Topic	Clinical Leadership	GSP Reference
	<ul style="list-style-type: none"> <li>• Compare and contrast a range of communication strategies and identify the factors that promote effective communication strategies within organisations.</li> <li>• Explore methods of undertaking impact mapping of service change and how this can support the process of change.</li> <li>• Identify barriers to change and how to develop strategies to explore and break down barriers.</li> <li>• Summarise qualitative methods to gather and analyse the experience of users, patients and carers and utilise the data to recognise areas of good practice/planning and help shape the planning process.</li> </ul>	
<b>Practical Skills</b>	<p>By the end of the training period HSS Trainees would be expected to apply in practice a range of clinical skills and critically reflect on their performance and will be able to:</p> <ol style="list-style-type: none"> <li>1. Demonstrate through personal example his/her own personal qualities, including values, principles and assumptions and critically reflect on personal performance and:                             <ul style="list-style-type: none"> <li>• Maintain and routinely practice critical self awareness, including ability to discuss strengths and weaknesses with supervisor, recognising external influences and changing behaviour accordingly.</li> <li>• Show awareness and sensitivity to the way in which cultural and religious beliefs affect approaches and decisions, and to respond effectively.</li> <li>• Recognise the manifestations of stress on self and others and know where and when to look for support.</li> <li>• Balance personal and professional roles and responsibilities, prioritising tasks and having realistic expectations of what can be completed by self and others.</li> <li>• Use a reflective approach to practice with an ability to learn from previous experience.</li> <li>• Use assessment, appraisal, complaints and other feedback to discuss and develop an understanding of own development needs.</li> <li>• Recognise, analyse and know how to deal with unprofessional behaviours in clinical practice taking into account local and national regulations.</li> <li>• Create open and non-discriminatory professional working relationships with colleagues, including awareness of the need to promote equality of opportunity and to prevent bullying and harassment in the workplace.</li> </ul> </li> <li>2. Work with others in teams and networks to deliver and improve services                             <ul style="list-style-type: none"> <li>• Work in differing and complementary roles within the different communities of practice within which they work.</li> <li>• Support bringing together different professionals, disciplines, and other agencies, to provide high quality healthcare.</li> <li>• Develop effective working relationships with colleagues and other staff through good communication skills, building rapport and articulating own view.</li> <li>• Communicate effectively in the resolution of conflicts, providing feedback, and identifying and rectifying team dysfunction.</li> <li>• Facilitate, chair and contribute to meetings within the department, the organisation, national societies/professional bodies.</li> <li>• Encourage staff to develop and exercise their own leadership skills.</li> <li>• Enable individuals, groups and agencies to implement plans and decisions.</li> <li>• Identify and prioritise tasks and responsibilities including to delegate and supervise safely.</li> </ul> </li> <li>3. Effectively management of services using critical reflection to evaluate and improve personal performance</li> </ol>	<p>1.1.12 1.2.3 5.1.1 5.1.2 5.1.3 5.1.4 5.1.12</p> <p>1.3.4 1.3.5 1.3.6 5.1.1 5.1.2 5.1.3 5.1.4 5.1.10</p>

Topic	Clinical Leadership	GSP Reference
	<ul style="list-style-type: none"> <li>• Develop and implement protocols and guidelines.</li> <li>• Analyse feedback and comments and integrate them into plans for the service.</li> <li>• Use clinical audit with the purpose of highlighting resources required.</li> <li>• Manage time and resources effectively in terms of delivering services to patients.</li> <li>• Prepare rotas, delegate, organise and lead teams.</li> <li>• Contribute to the recruitment and selection of staff.</li> <li>• Contribute to staff development and training, including mentoring, supervision and appraisal.</li> <li>• Use and adhere to clinical guidelines and protocols, relevant reporting systems and complaints management systems.</li> <li>• Improve services following evaluation/performance management.</li> </ul> <p>4. Contribute to continuous service improvement developing improvements to service and reflecting on experience to ensure the delivery of high quality services</p> <ul style="list-style-type: none"> <li>• Report clinical incidents in accordance with reporting procedures.</li> <li>• Assess and analyse situations, services and facilities implementing recommendations in order to minimise risk to patients and the public.</li> <li>• Monitor the quality of equipment and safety of environment relevant to the specialism acting swiftly to resolve issues.</li> <li>• Design and undertake an audit project, present the results and develop an implementation and re-evaluation plan as appropriate to the audit.</li> <li>• Contribute to meetings which cover audit; critical incident reporting; patient outcomes challenges, justifying, influencing as appropriate.</li> <li>• Question and challenge existing practice in order to improve services.</li> <li>• Apply creative thinking approaches (or methodologies or techniques) in order to propose solutions to service issues.</li> <li>• Provide clinical expertise in evolving situations.</li> <li>• Present written and verbal information in a clear, concise way using language appropriate to the audience.</li> </ul> <p>5. Contribute to and undertake strategic planning in line with the aspirations of the organisation and its impact on service quality and delivery</p> <ul style="list-style-type: none"> <li>• Discuss the local, national and UK health priorities and how they impact on the delivery of healthcare relevant to the specialism</li> <li>• Identify trends, future options and strategy relevant to the specialism and delivering patient services</li> <li>• Compare and benchmark healthcare services</li> <li>• Use a broad range of scientific and policy publications relating to delivering healthcare services</li> <li>• Prepare for meetings – reading agendas, understanding minutes, action points and background research on agenda items.</li> <li>• Work collegiately and collaboratively with a wide range of people outside the immediate clinical setting.</li> <li>• Evaluate outcomes and re-assess the solutions through research, audit and quality assurance activities.</li> <li>• Evaluate the wider impact of implementing change in healthcare provision and the potential for opportunity costs.</li> </ul>	<p>1.4.1-1.4.6</p> <p>5.1.5</p> <p>5.1.6</p> <p>5.1.8</p> <p>5.1.9</p> <p>5.1.10</p> <p>5.1.11</p> <p>1.1.11</p> <p>1.4.4</p> <p>1.4.5</p> <p>1.4.6</p> <p>5.1.3</p> <p>5.1.7</p> <p>5.1.8</p> <p>5.1.1</p> <p>5.1.12</p>

Topic	Clinical Leadership	GSP Reference
<b>Attitudes and Behaviours</b>	<p>By the end of the training period HSS Trainees would be expected to demonstrate the attitudes and behaviours necessary for the role of a Consultant Clinical Scientist and will be able to:</p> <ol style="list-style-type: none"> <li>1. Consistently operate within sphere of personal capability and level of authority, managing personal workload and objectives to achieve quality of care.                             <ul style="list-style-type: none"> <li>• Adopt a patient focussed approach to decisions that acknowledges the right, values and strengths of patients and the public.</li> <li>• Comply with relevant legislation to recognise and show respect for diversity and differences in others.</li> <li>• Be conscientious, able to manage time and delegate responsibly.</li> <li>• Recognise personal health as an important issue in maintaining personal capability.</li> <li>• Accept responsibility for own actions.</li> <li>• Commit to continuing professional development, which involves seeking training and self-development opportunities, learning from colleagues and accepting constructive criticism.</li> <li>• Accept professional regulation and ensure compliance with relevant standards.</li> <li>• Promote appropriate professional attitudes and values.</li> <li>• Act with probity and be willing to be truthful and admit and learn from errors.</li> </ul> </li> <li>2. Actively seek to encourage and work within a team environment, including multidisciplinary teams                             <ul style="list-style-type: none"> <li>• Interact effectively with professionals in other disciplines and agencies</li> <li>• Respect the skills and contributions of colleagues</li> <li>• Recognise good advice and continuously promote value-based non-prejudicial practice.</li> <li>• Use authority appropriately and assertively being willing to follow when necessary.</li> <li>• Use authority sensitively and assertively to resolve conflict and disagreement.</li> <li>• Take full part in multidisciplinary meetings.</li> <li>• Show recognition of a team approach and willingness to consult and work as part of a team</li> <li>• Respect colleagues and other healthcare professionals.</li> </ul> </li> <li>3. Manage resources effectively in the interests of improving patient services promoting equity in healthcare access and delivery                             <ul style="list-style-type: none"> <li>• Use public money appropriately and to taking action when resources are not used efficiently or effectively.</li> <li>• Recognise that in addition to patient specific clinical records, clinical staff also have responsibilities for other records (e.g. research).</li> <li>• Supervise the work of less experienced colleagues supporting them to develop.</li> <li>• Use communication skills and inspire confidence and trust.</li> <li>• Respond constructively to the outcome of reviews, assessments or appraisals of performance</li> <li>• Recognise the needs of all staff in the clinical team.</li> </ul> </li> <li>4. Engage in continuous service improvement in the interests of better patient outcomes                             <ul style="list-style-type: none"> <li>• Actively seek advice/assistance whenever concerns about patient safety arise.</li> </ul> </li> </ol>	<p>1.1.3 1.1.4 1.1.6 5.1.1</p> <p>1.3.1 1.3.2</p> <p>1.3.1 1.3.5 5.1.2 5.1.6 5.1.11</p> <p>1.1.12 1.2.2 3.1.17</p>

## Specialty-specific virology curriculum

### Introduction

The precise composition of an individual training programme should be structured around the past experience and aspirations of each trainee and should set out educational objectives against which progress can be assessed. Programmes should identify how specific areas of training not covered by the departments involved will be obtained (e.g. secondment for experience in microbiology, communicable diseases/epidemiology, public health microbiology), together with any courses deemed necessary.

### Stage 1: Underpinning microbiological and virological practice (12 months)

*(This stage to be examined in FRCPath Part 1 examination)*

#### Stage 1 Module 1: Laboratory aspects of microbiology and virology

Topic	Stage 1 Module 1 Laboratory aspects of microbiology and virology	Assessment methods	GSP reference
<b>Learning objective</b>	By the end of the training period trainees will, in respect of laboratory aspects of microbiology and virology, be able to: <ul style="list-style-type: none"> <li>• analyse, synthesise, evaluate and apply knowledge</li> <li>• perform a range of technical and clinical skills and procedures and</li> <li>• demonstrate the attitudes and behaviours necessary for professional practice as a consultant clinical scientist dealing with the complexities, uncertainties and tensions of professional practice at this level.</li> </ul>		
<b>Knowledge</b> 1. Selection and validation of appropriate tests 2. Scientific quality assurance of test procedures 3. Validity and reliability of test results and their application	By the end of the training period the trainee will be able to demonstrate the ability to analyse, evaluate and synthesise relevant knowledge and its application to their professional practice in relation to: <ul style="list-style-type: none"> <li>• detection and identification of organisms, including bacteria, viruses, fungi, parasites and protozoa</li> <li>• laboratory techniques in the use of antimicrobial agents</li> <li>• systems for ensuring the quality assurance of test procedures and reagents</li> <li>• validity and reliability of test results and their application</li> <li>• the potential utility of new technologies and novel anti-microbial agents</li> </ul>	FRCPath Part 1, WPBA	1, 2
<b>Technical skills and procedures</b>	By the end of the training period the trainee will be able to demonstrate a critical understanding of current relevant research, theory and knowledge and its application to the performance of the following technical procedures and laboratory skills: <ul style="list-style-type: none"> <li>• detection and identification of organisms                             <ul style="list-style-type: none"> <li>– staining techniques and microscopy</li> </ul> </li> </ul>	WPBA	1, 2

	<ul style="list-style-type: none"> <li>- culture, including automated techniques</li> <li>- biochemical techniques</li> <li>- antigen/antibody detection immunoassays</li> <li>- typing techniques, including reference laboratory referral where appropriate</li> <li>- nucleic acid based techniques including direct sequencing</li> <li>- proteomics, including mass spectroscopy</li> <li>• laboratory techniques             <ul style="list-style-type: none"> <li>- conventional techniques for susceptibility testing including disc, broth dilution, E-test</li> <li>- automated/semi-automated susceptibility testing</li> <li>- nucleic acid techniques, including gene sequencing</li> <li>- reference laboratory referral where appropriate</li> <li>- antimicrobial monitoring assays</li> <li>- assessing host factors affecting antimicrobial response</li> </ul> </li> <li>• systems for ensuring the quality assurance of test procedures and reagents             <ul style="list-style-type: none"> <li>- use of appropriate internal controls and monitoring assay performance</li> <li>- internal quality assurance</li> <li>- external quality assurance</li> </ul> </li> <li>• validity and reliability of test results and their application             <ul style="list-style-type: none"> <li>- understanding of uncertainty of measurement</li> <li>- using systems to produce timely, accurate and relevant laboratory reports with appropriate interpretative comments.</li> </ul> </li> </ul>		
<p><b>Clinical skills</b></p>	<p>By the end of the training period the trainee will be able to apply knowledge of laboratory aspects of microbiology and virology to perform the clinical skills necessary to manage under supervision:</p> <ul style="list-style-type: none"> <li>• to advise appropriately on the tests required to investigate a potentially infected patient.</li> </ul>	<p>WPBA, MSF</p>	<p>3</p>

**Stage 1 Module 2: Health and safety in microbiological and virological practice**

Topic	Stage 1 Module 2 Health and safety in microbiological and virological practice	Assessment methods	GSP reference
<b>Learning objectives</b>	By the end of the training period trainees will, in respect of the health and safety of microbiological and virological practice, obtain an in-depth understanding of health and safety issues both locally and nationally in order to practise safely in a laboratory and in a clinical or other setting and to be able to advise on safe practice, to obtain an understanding of risk assessment for dealing with category 3 and 4 pathogens and to be familiar with the requirements for handling such pathogens and to be familiar with the categorization of organisms as set out in <i>The Approved List of Biological Agents</i> (ACDP 2004), be able to: <ul style="list-style-type: none"> <li>• analyse, synthesise, evaluate and apply knowledge</li> <li>• perform a range of technical and clinical skills and procedures and</li> <li>• demonstrate the attitudes and behaviours necessary for professional practice as a consultant clinical scientist dealing with the complexities, uncertainties and tensions of professional practice at this level.</li> </ul>		
<b>Knowledge</b> 1. Health and safety legislation and guidance 2. ACDP categorization of biological agents 3. Laboratory safety and containment 4. Transport regulations	By the end of the training period the trainee will be able to demonstrate the ability to analyse, evaluate and synthesise relevant knowledge and its application to their professional practice in relation to: <ul style="list-style-type: none"> <li>• Health and Safety at Work Act (1974)</li> <li>• Reporting of Injuries, Diseases and Dangerous Occurrences Regulations (RIDDOR)</li> <li>• Control of Substances Hazardous to Health (COSHH) Regulations (2002)</li> <li>• Genetically Modified Organisms (Contained Use) Regulations (2001)</li> <li>• Management of Health and Safety at Work Regulations (1999)</li> <li>• Transport of Infectious Substances (2011) guidance</li> <li>• The management, design and operation of microbiological containment laboratories (2001) guidance (HSE)</li> <li>• Biological agents: Managing the risks in laboratories and healthcare premises (HSE)</li> <li>• Safe disposal of clinical waste (1999) guidance.</li> </ul>	FRCPATH Part 1, WPBA	1, 2
<b>Technical skills and procedures</b> Use of risk assessment tools including risk matrices	By the end of the training period the trainee will be able to demonstrate a critical understanding of current relevant research, theory and knowledge and its application to the performance of the following technical procedures and laboratory skills: <ul style="list-style-type: none"> <li>• technical procedures for performing an infection–prevention and control-oriented risk assessment when required for all procedures undertaken in the laboratory, in areas related to laboratory practice, and in the health care setting, for all categories of worker, including the pregnant and immunocompromised.</li> </ul>	WPBA	1, 2
<b>Clinical skills</b>	By the end of the training period the trainee will be able to apply knowledge of health and safety in microbiological and virological practice to perform the clinical skills necessary to manage under supervision: <ul style="list-style-type: none"> <li>• to assess appropriately the need for health and safety precautions in relation to patient management.</li> </ul>	WPBA	1, 2

**Stage 1 Module 3: Clinical presentation and management of infection**

Topic	Stage 1 Module 3 Clinical presentation and management of infection	Assessment methods	GSP reference
<p><b>Learning objectives</b></p>	<p>By the end of the training period trainees will, in respect of clinical presentation and management of infection*, be able to:</p> <ul style="list-style-type: none"> <li>• analyse, synthesise, evaluate and apply knowledge</li> <li>• perform a range of technical and clinical skills and procedures and</li> <li>• demonstrate the attitudes and behaviours necessary for professional practice as a consultant clinical scientist dealing with the complexities, uncertainties and tensions of professional practice at this level.</li> </ul> <p>*In primary care In secondary and tertiary care (including critical care) Special risk groups including:</p> <ul style="list-style-type: none"> <li>• pregnancy</li> <li>• neonates and children</li> <li>• sexual health</li> <li>• the returning traveller</li> <li>• immunocompromised patients</li> <li>• elderly patients.</li> </ul> <p>These topics will have been covered in the STP programme, but in this first year of the HST programme, scientific and clinical knowledge will be consolidated and expanded and clinical microbiology skills developed.</p>		
<p><b>Knowledge</b></p>	<p>This assumes knowledge of the laboratory aspects of these clinical infections (see Stage 1 Module 1). <i>NOTE 1:</i> These syndromes will include infections caused by bacteria, viruses, fungi and parasites. <i>NOTE 2:</i> These infections will occur in patients in special groups including pregnancy and immunocompromised patients.</p> <p>By the end of the training period the trainee will be able to demonstrate the ability to analyse, evaluate and synthesise relevant knowledge and its application to their professional practice in relation to clinical presentation and management of infections including:</p> <ul style="list-style-type: none"> <li>• sexually transmitted infections (STIs)</li> <li>• genito-urinary tract infections</li> <li>• respiratory tract infections</li> <li>• gastrointestinal infections including hepato- biliary tract infections</li> <li>• skin and soft tissue infections</li> <li>• infections of bones and joints including prosthetic devices</li> <li>• septicaemia, bacteraemia and fungaemia</li> <li>• fever of unknown origin</li> <li>• infection of the cardiovascular system including prosthetic devices</li> <li>• infections of the eye</li> </ul>	<p>FRCPATH Part 1, WPBA</p>	<p>1, 2, 3</p>

	<ul style="list-style-type: none"> <li>• post-operative infections</li> <li>• infections of the central nervous system</li> <li>• rashes.</li> </ul>		
<b>Technical skills and procedures</b>	<p>By the end of the training period the trainee will be able to demonstrate a critical understanding of current relevant research, theory and knowledge and its application to the performance of the following technical procedures and laboratory skills:</p> <ul style="list-style-type: none"> <li>• technical procedures for accurate, clear and concise documentation of patient data.</li> </ul>	WPBA	2
<b>Clinical skills</b>	<p>By the end of the training period the trainee will be able to apply knowledge of clinical presentation and management of infection to perform the clinical skills necessary to manage under supervision:</p> <ul style="list-style-type: none"> <li>• take a relevant basic clinical/infection history</li> <li>• manage (under supervision) of common clinical syndromes</li> <li>• establish rapport with clinical and primary care staff</li> <li>• explain results and clinical management plans simply and effectively to both clinicians and patients including recognising infection control implications and implementing appropriate control measures.</li> </ul>	WPBA, MSF	1, 3

**Stage 1 Module 4: Antimicrobial chemotherapy**

Topic	Stage 1 Module 4 Antimicrobial chemotherapy	Assessment methods	GSP reference
<b>Learning objective</b>	By the end of the training period trainees will, in respect of antimicrobial chemotherapy, be able to: <ul style="list-style-type: none"> <li>• analyse, synthesise, evaluate and apply knowledge</li> <li>• perform a range of technical and clinical skills and procedures and</li> <li>• demonstrate the attitudes and behaviours necessary for professional practice as a consultant clinical scientist dealing with the complexities, uncertainties and tensions of professional practice at this level.</li> </ul>		
<b>Knowledge</b>	By the end of the training period the trainee will be able to demonstrate the ability to analyse, evaluate and synthesise relevant knowledge and its application to their professional practice in relation to: <ul style="list-style-type: none"> <li>• the range of therapies available for infectious disease and the clinical indications for their use</li> <li>• the importance and range of adverse effects including allergic reactions</li> <li>• the importance and range of side effects</li> <li>• the classification of antimicrobial agents</li> <li>• mechanism of action of antimicrobial agents</li> <li>• mechanisms for development of resistance to these agents</li> <li>• the basic principles of prophylaxis, with antimicrobials, vaccines and immune globulins</li> <li>• monitoring levels of antimicrobial chemotherapy for efficacy and patient safety</li> <li>• the importance of interactions between antimicrobial agents and other therapeutic agents</li> <li>• therapeutic use of immune globulins.</li> </ul>	FRCPATH Part 1, WPBA	1, 2
<b>Technical skills and procedures</b>	By the end of the training period the trainee will be able to demonstrate a critical understanding of current relevant research, theory and knowledge and its application to the performance of the following technical procedures and laboratory skills: <ul style="list-style-type: none"> <li>• Laboratory techniques                             <ul style="list-style-type: none"> <li>– conventional techniques for susceptibility testing including disc, broth dilution, E-test</li> <li>– automated/semi-automated susceptibility testing</li> <li>– nucleic acid techniques, including gene sequencing</li> <li>– reference laboratory referral where appropriate</li> <li>– antimicrobial monitoring assays</li> <li>– assessing host factors affecting antimicrobial response</li> </ul> </li> <li>• systems for ensuring the quality assurance of test procedures and reagents                             <ul style="list-style-type: none"> <li>– use of appropriate internal controls and monitoring assay performance</li> <li>– internal quality assurance</li> <li>– external quality assurance</li> </ul> </li> <li>• validity and reliability of test results and their application</li> </ul>	WPBA	1, 2

	<ul style="list-style-type: none"> <li>- understanding of uncertainty of measurement</li> <li>- using systems to produce timely, accurate and relevant laboratory reports with appropriate interpretative comments.</li> </ul>		
<b>Clinical skills</b>	<p>By the end of the training period the trainee will be able to apply knowledge of antimicrobial chemotherapy to perform the clinical skills necessary to manage under supervision:</p> <ul style="list-style-type: none"> <li>• to apply knowledge of treatment and prevention strategies.</li> </ul>	WPBA	3

**Stage 1 Module 5: The role of microbiology and virology in infection prevention and control**

Topic	Stage 1 Module 5 The role of microbiology and virology in infection prevention and control	Assessment methods	GSP reference
<b>Learning objective</b>	By the end of the training period trainees will, in respect of, the role of microbiology and virology in infection prevention and control be able to: <ul style="list-style-type: none"> <li>• analyse, synthesise, evaluate and apply knowledge</li> <li>• perform a range of technical and clinical skills and procedures and</li> <li>• demonstrate the attitudes and behaviours necessary for professional practice as a consultant clinical scientist dealing with the complexities, uncertainties and tensions of professional practice at this level.</li> </ul>		
<b>Knowledge</b>	By the end of the training period the trainee will be able to demonstrate the ability to analyse, evaluate and synthesise relevant knowledge and its application to their professional practice in relation to: <ul style="list-style-type: none"> <li>• outbreaks of infection in hospital and the community                             <ul style="list-style-type: none"> <li>– the reservoirs, sources, routes of transmission and portals of entry of common HAIs</li> <li>– the epidemiology and control of common and important multi-resistant organisms</li> <li>– the processes for disinfection and sterilisation in the hospital and primary care settings including their indications advantages and limitations</li> <li>– when patient isolation, cohorting and ward closure are used to control or prevent the spread of infection</li> <li>– the types of patient isolation, the specific precautions they use and in what circumstance they are used</li> <li>– the role of occupational health</li> <li>– the role of the infection prevention and control team</li> </ul> </li> <li>• public health interventions including:                             <ul style="list-style-type: none"> <li>– principles of active and passive immunisation</li> <li>– use of chemoprophylaxis</li> <li>– use of vaccines and the schedules of immunisation</li> <li>– role of occupational health</li> <li>– role of public health</li> <li>– role of Public Health England (and equivalent bodies in Devolved Administrations).</li> </ul> </li> </ul>	FRCPATH Part 1, WPBA	1
<b>Technical skills and procedures</b>	By the end of the training period the trainee will be able to demonstrate a critical understanding of current relevant research, theory and knowledge and its application to the performance of the following technical procedures and laboratory skills: <ul style="list-style-type: none"> <li>• for using simple epidemiological/ statistical techniques in the evaluation of potential outbreaks.</li> </ul>	WPBA	2, 3, 4
<b>Clinical skills</b>	By the end of the training period the trainee will be able to apply knowledge of the role of microbiology	WPBA, MSF	1, 2

	<p>and virology in infection prevention and control to perform the clinical skills necessary to manage under supervision:</p> <ul style="list-style-type: none"> <li>• to liaise and provide evidence based advice with respect to infection control, public health and clinical teams and prepare accurate, clear and concise documentation and analyse of outbreak data.</li> </ul>		
--	---	--	--

## Stage 2: Specialist virological practice (48 months)

### Introduction

This period of training in clinical virology will consist of consolidation of clinical and laboratory work started in Stage 1 up to consultant level. The trainee will have a sound theoretical and practical knowledge of virological practice but will not have had a great deal of unsupervised experience in applying that knowledge. These stages of training are thus devoted to acquiring self-sufficiency in the specialty. It is meant to be a guide for both the educational supervisor and trainee on the learning topics and themes that should be covered during this stage of training. It is recommended that the educational supervisor and the trainee sit down together at the beginning of each stage and plan the training as much as possible.

Use should be made of OLAT for recording progress in training. It is a modular curriculum, consisting of core and optional components. **All FRCPath trainees must complete the core components.** The optional components are designed to provide the trainee with options to choose from if they have completed the mandatory requirements of the curriculum prior to the award of FRCPath and that best reflect their needs and aspirations. In many instances, the optional component may need to be arranged anything up to a year before the anticipated start date.

In-course assessment is included.

Wherever possible, no time limit has been set for any of the components because it is envisaged that many of the components may be running concurrently, e.g. dealing with management issues and contributing to the clinical service.

It is expected that training will occur as an appropriately supervised apprenticeship and therefore 50–80% of training would normally be delivered by in-service training. It should be with a readily available consultant, well supervised, with the appropriate content, have a broad exposure and include laboratory issues.

As for the Stage 1 curriculum, the knowledge, skills, attitudes and behaviours are given for each module (if relevant).

Experience gained by the provision of independent practice (which ideally includes out-of-hours working) should continue for a period of training sufficient to enable the trainee to give independent 'out-of-hours' clinical advice in relation to the practice of this specialty (see section 'Development of Independent Practice' above).

### Objective

Throughout their training, trainees are given increasing responsibility and independence appropriate for their demonstrated level of competence and professional development, as judged by their clinical and educational supervisors. The purpose of this stage of training is to take such graded responsibility further, to enable the transition to the independent practice required of an FRCPath holder.

Demonstration of the skills required for independent practice is a requirement of the curriculum, and the relevant competencies must be assessed and achieved prior to completion of the training programme.

Currently, the most appropriate context in which to train for and achieve the competencies for independent practice is out-of-hours working, in an 'on-call' setting. However, there may be practical alternatives to this training context. If a training programme does not offer the opportunity to develop and demonstrate these skills through out-of-hours working, there must be alternative arrangements agreed by the relevant individual overseeing training.

Since the trainee will have reduced supervision during this form of training, to ensure patient safety and to optimise the benefits of this training, the following criteria must be met before it starts:

- the trainee must have been assessed by clinical and educational supervisors to be capable of safe practice with reduced supervision in relevant areas of the curriculum. They must therefore be in full compliance with the educational processes of the Annual Progression Review, i.e. ready to start more independent practice.
- before starting this training, the trainee must have a formal induction to ensure that they are familiar with the aspects of the work to be performed. This induction must be relevant to the time at which the work is to be performed, and for the organisations for which it is to be performed. It will include relevant local policies.
- the supervisor must ensure that the trainee understands the professional obligations of this form of practice, including availability and confidentiality.
- the trainee must have demonstrated to clinical and educational supervisors through previous directly supervised practice, competence in managing common clinical and laboratory problems of the kind likely to be encountered in the virology service, relevant to the setting in which the trainee will undertake this form of practice.
- arrangements for 'handover' of clinical responsibility during this form of practice must be explicit.

#### Arrangements for cover by clinical supervisor

The ultimate responsibility for the quality of patient care and the quality of training lies with the supervisor. However, the trainee will be expected to exercise professional judgement in recognising the limits of their capabilities and in involving senior colleagues in complex or challenging issues/decisions. The arrangements for obtaining such help and advice, at any time during this training period, must be formal and explicit. Although the purpose of this training is to enable independent working, the trainee must not be discouraged from asking for help from a clinical supervisor during this period at any time.

After a period of independent practice, the trainee must be debriefed by the clinical supervisor. The purpose of this debrief is to ensure that patients are being managed safely, and that prompt feedback is provided on the trainee's performance against the relevance competencies for this form of training (see below) and other competencies in the curriculum. The debriefing session may take the form of 'handover' to colleagues.

#### Competencies to be demonstrated

Topic	Professional practice	Assessment methods	GSP reference
<b>Learning objective</b>	By the end of the training period trainees will, in respect of achieving sufficient knowledge of professional practice to offer basic advice on the interpretation of results be able to: <ul style="list-style-type: none"> <li>• analyse, synthesise, evaluate and apply knowledge</li> <li>• perform, adapt and master a range of technical and clinical skills and procedures.</li> </ul> Demonstrate the attitudes and behaviours necessary for professional practice as a consultant clinical scientist dealing with the complexities, uncertainties and tensions of professional practice at this level.		
<b>Knowledge</b> Independent practice and working out of hours	By the end of the training period the trainee will be able to demonstrate the ability to analyse, evaluate and synthesise relevant knowledge and its application to their professional practice with respect to <ul style="list-style-type: none"> <li>• increasing familiarity with laboratory and clinical aspects (including infection prevention and control, public and occupational health) of bacterial, viral and related infections</li> <li>• know what must be dealt with urgently and what may be dealt with less urgently.</li> </ul>	FRCPATH Part 2	1, 2, 3

<p><b>Technical skills and procedures</b></p>	<p>By the end of the training period the trainee will be able to demonstrate a critical understanding of current relevant research, theory and knowledge and its application to the performance, adaptation and mastery of the following technical procedures and laboratory skills:</p> <ul style="list-style-type: none"> <li>• recognise and work within own limitations in knowledge</li> <li>• liaise and communicate with a wide range of healthcare workers involved in the diagnosis, management, prevention and control of infection</li> <li>• communicate effectively in person and by telephone</li> <li>• refer to more experienced colleagues as appropriate</li> <li>• provide continuity of care</li> <li>• prioritise work according to urgency</li> <li>• deal with difficult situations independently</li> <li>• recognise and analyse the overall effects of competing pressures on healthcare resources, e.g. availability of laboratory tests, availability of beds</li> <li>• collect, analyse and interpret information from a variety of sources</li> <li>• make safe decisions when clinical, laboratory or epidemiological information is incomplete or evolving</li> <li>• work with clinical and laboratory colleagues under pressure</li> </ul>	<p>FRCPATH Part 2, WPBA, MSF</p>	<p>1, 2, 3</p>
<p><b>Clinical skills</b></p>	<p>By the end of the training period the trainee will be able to apply knowledge of developing independent practice to perform, adapt and master the clinical skills necessary to:</p> <ul style="list-style-type: none"> <li>• demonstrate increasing familiarity with laboratory and clinical aspects (including infection prevention and control, public and occupational health) of bacterial, viral and related infections</li> <li>• demonstrate knowledge of what must be dealt with urgently and what may be dealt with less urgently.</li> </ul>	<p>FRCPATH Part 2, WPBA</p>	<p>1, 2, 3</p>

### **Core components**

The core components are designed to equip the trainee with competencies required for the acquisition of FRCPath by examination in virology and to allow practice of clinical virology at consultant level. They consist of the following modules:

- 1 Basic virology.
- 2 Clinical virology.
  - 2.1 Laboratory techniques.
  - 2.2 Clinical aspects.
- 3 Management.
- 4 Health and safety.
- 5 Understanding research and development in virology.
- 6 Public health and epidemiology.

In-course assignments are an integral part of the FRCPath virology examination. The assignment for each of the components must be completed and assessed to be satisfactory before the trainee will be permitted to sit for the FRCPath Part 2 examination. It is the responsibility of the educational supervisor to ensure that the trainee's assignment(s) meet the guidelines for the FRCPath examination for virology, before they are submitted to the College for assessment. The assignments and the responsibility of the trainee and their educational supervisor are listed at the end of each of the essential components.

### **Optional components**

These components are designed to complement the essential modules undertaken by the trainee in Stage 2. They allow trainees to develop a specialist interest and are suitable for those trainees who have achieved core components quickly. The time at which these optional components are taken depends on the progress of trainee through the core components. They may be undertaken at any stage of the training. These optional modules build upon the core competencies already acquired by the trainee as a result of undergoing the training outlined in the core components.

Trainees should select from the following modules which best suits their training requirements and career aspirations. As these are optional, only guidance on the aims and objectives of each module can be given. Optional components may also be designed by the trainee. These need to be written in conjunction with the educational supervisor and should be submitted to the Postgraduate Dean (if necessary) and Chairman of the CATT for approval. As time goes on, extra optional components may be added.

1. Supraregional attachment
2. Microbiology attachment
3. Attachment to another virology centre, e.g. reference laboratory (to expand and consolidate clinical virology module)
4. Exotic virus infections

**Core components**
**Stage 2 Module 1: Basic virology**

This module should equip the trainee with a detailed understanding of basic virology and the pathogenesis of virus infections.

Topic	Stage 2 Module 1 Basic virology	Assessment methods	GSP reference
<b>Learning objective</b>	By the end of the training period trainees will, in respect of basic virology, be able to: <ul style="list-style-type: none"> <li>• analyse, synthesise, evaluate and apply knowledge</li> <li>• perform, adapt and master a range of technical and clinical skills and procedures and</li> <li>• demonstrate the attitudes and behaviours necessary for professional practice as a consultant clinical scientist dealing with the complexities, uncertainties and tensions of professional practice at this level.</li> </ul>		
<b>Knowledge</b>	By the end of the training period the trainee will be able to demonstrate the ability to analyse, evaluate and synthesise relevant knowledge and its application to their professional practice in relation to: <ul style="list-style-type: none"> <li>• up to date knowledge of virus structure and function</li> <li>• virus classification and phylogeny</li> <li>• the mechanisms involved in virus replication</li> <li>• the modes of transmission of virus infections</li> <li>• virus-host cell interactions</li> <li>• host responses to virus infections</li> <li>• the pathogenesis of virus diseases</li> <li>• the pharmacology and clinical use of anti-viral drugs</li> <li>• knowledge of                             <ul style="list-style-type: none"> <li>- virus vaccines</li> <li>- immunoglobulins</li> </ul> </li> <li>• understanding of prions and prion diseases</li> <li>• knowledge of bacterial infections commonly diagnosed in Virology laboratories, e.g. <i>Chlamydia spp</i>, <i>Chlamydophila spp.</i>, <i>Coxiella burnetii</i>.</li> </ul>	FRCPATH Part 2, WPBA	1, 2, 4
<b>Technical skills and procedures</b>			
<b>Clinical skills</b>			

### **Responsibilities of the educational supervisor**

- Encourage trainee to become a member of learned societies, e.g. Society for General Microbiology (SGM), European Society for Clinical Virology (ESCV).
- Encourage/facilitate attendance at local/national/international meetings.
- Help trainee organise time and information regarding relevant courses.
- Approve attendance at meetings/courses so that funding of study leave can be applied for from the relevant quarters.
- Supervision and encouragement of acquisition of portfolio evidence of competence and completion of the written assignments.

### **In-course assessment**

Write one review article of up to 3000 words (format as per *Reviews in Medical Virology*). The following list provides examples of suitable general topics to choose from, but candidates are encouraged to devise their own, in consultation with their educational supervisors:

- mechanisms underlying the establishment and maintenance of viral latency
- mechanisms underlying viral carcinogenesis
- viral strategies for interfering with cellular apoptosis
- viral avoidance of adaptive immune responses
- identification of novel viral targets for anti-viral therapy
- development of a novel vaccine against a virus infection which currently has no available licensed vaccine in the UK
- rational design of therapeutic vaccines
- the use of phylogeny in the investigation of viral evolution
- the pathogenesis of transmissible spongiform encephalopathy (TSE)
- the pathogenesis of chronic viral hepatitis.

**Stage 2 Module 2: Laboratory techniques**

This component should provide the trainee with the ability to appreciate the significance of, and to critically evaluate results generated in the laboratory. This will run in parallel to the service commitments of the trainee. However, if the trainee is in a supernumerary post this will be for a minimum of 6 months.

**Stage 2 Module 2a: Laboratory techniques (general)**

Topic	Stage 2 Module 2a Laboratory techniques (general)	Assessment methods	GSP references
<b>Learning objective</b>	By the end of the training period trainees will, in respect of general laboratory techniques, be able to: <ul style="list-style-type: none"> <li>• analyse, synthesise, evaluate and apply knowledge</li> <li>• perform, adapt and master a range of technical and clinical skills and procedures and</li> <li>• demonstrate the attitudes and behaviours necessary for professional practice as a consultant clinical scientist dealing with the complexities, uncertainties and tensions of professional practice at this level.</li> </ul>		
<b>Knowledge</b>	By the end of the training period the trainee will be able to demonstrate the ability to analyse, evaluate and synthesise relevant knowledge and its application to their professional practice in relation to: <ul style="list-style-type: none"> <li>• technical management of a section of the laboratory</li> <li>• the advantages/disadvantages and strength/weaknesses of the techniques in use</li> <li>• testing algorithms and selection of investigations including rapid diagnostic methods</li> <li>• the importance of confirmatory assays</li> <li>• how automated serology machines work and which assays are suitable for use in them</li> <li>• laboratory health and safety issues (see also relevant core module).</li> </ul>	FRCPATH Part 2, WPBA	2, 3
<b>Technical skills and procedures</b>	By the end of the training period the trainee will be able to demonstrate a critical understanding of current relevant research, theory and knowledge and its application to the performance, adaptation and mastery of the following technical procedures and laboratory skills: <ul style="list-style-type: none"> <li>• manual dexterity</li> <li>• time management of practical bench work</li> <li>• refer to relevant SOPs/EPs</li> <li>• function as an independent worker at the bench, and be able to critically assess own and others' results</li> <li>• perform assay independently.</li> </ul>	WPBA, MSF	2, 3
<b>Clinical skills</b>			

**Stage 2 Module 2b: Laboratory techniques (specific)**

Topic	Stage 2 Module 2b Laboratory techniques (specific)	Assessment methods	GSP references
<b>Learning objective</b>	By the end of the training period trainees will, in respect of specific laboratory techniques, be able to: <ul style="list-style-type: none"> <li>• analyse, synthesise, evaluate and apply knowledge</li> <li>• perform, adapt and master a range of technical and clinical skills and procedures and</li> <li>• demonstrate the attitudes and behaviours necessary for professional practice as a consultant clinical scientist dealing with the complexities, uncertainties and tensions of professional practice at this level.</li> </ul>		
<b>Knowledge</b>	By the end of the training period the trainee will be able to demonstrate the ability to analyse, evaluate and synthesise relevant knowledge and its application to their professional practice in relation to: <ul style="list-style-type: none"> <li>• serological assays (ELISA, immunofluorescence [IF], automated EIA serology, neutralisation, CFT, latex and gel particle agglutination)</li> <li>• basic principles of assays:                             <ul style="list-style-type: none"> <li>– terms and composition of solid phase,</li> <li>– conjugate, substrate, optical density,</li> <li>– assay format (direct/indirect, competitive, capture) advantages and disadvantages of each.</li> <li>– sources of antigens (e.g. viral lysate, recombinant, synthetic peptide)</li> <li>– problems of immunoglobulin M (IgM) and immunoglobulin G (IgG) assays, including role of rheumatoid factor</li> <li>– terms relating to parameters of assays, i.e. sensitivity, specificity, positive and negative predictive values</li> </ul> </li> <li>• the principles behind confirmation of antigen detection assays, including confirmation by neutralisation</li> <li>• the principles behind confirmation of serology based antibody assays</li> <li>• the principles of virus detection and characterisation by:                             <ul style="list-style-type: none"> <li>– cell culture including (i) understanding of primary, secondary, continuous cell lines with examples and virus susceptibility, (ii) cytopathic effects, (iii) haemadsorption, (iv) interference, (v), infectious dose,(vi) plaque reduction</li> <li>– electron microscopy, including understanding of the principles and practical aspects of transmission EM, including negative staining</li> <li>– antigen detection, including direct immunofluorescence (on clinical samples and cell culture isolates), and immunoassay</li> </ul> </li> <li>• molecular tests including nucleic acid amplification, and sequencing available for virus diagnosis, including quantitative assays.</li> <li>• the clinical importance of quantitative assays</li> </ul>	FRCPATH Part 2, WPBA	2, 3

	<ul style="list-style-type: none"> <li>the applications of genotyping and the methods used to determine genotypes</li> <li>the importance and types of assay control</li> <li>the risks of contamination and how it can be prevented</li> <li>the need for designated laboratory areas in nucleic acid amplification testing</li> <li>demonstrating knowledge of quality assurance for cell culture, electron microscopy, molecular techniques and rapid virus detection.</li> </ul>		
<b>Technical skills and procedures</b>	<p>By the end of the training period the trainee will be able to demonstrate a critical understanding of current relevant research, theory and knowledge and its application to the performance, adaptation and mastery of the following technical procedures and laboratory skills:</p> <ul style="list-style-type: none"> <li>perform enzyme-linked immunoassays (EIA) and molecular tests and assess run validity and acceptance criteria</li> <li>be able to implement internal quality control programmes.</li> <li>perform agglutination tests.</li> <li>perform rapid direct antigen detection by immunoassays including immunofluorescence and EIA.</li> <li>perform molecular amplification techniques (including nucleic acid sequencing) in current use with critical review of results.</li> <li>use sequencing information to determine relatedness of viruses including in the outbreak situation.</li> </ul>	WPBA	2, 3
<b>Clinical skills</b>			

**Stage 2 Module 2c: Laboratory techniques (interpretation)**

Topic	Stage 2 Module 2c Laboratory techniques (interpretation)	Assessment methods	GSP references
<b>Learning objective</b>	By the end of the training period trainees will, in respect of the interpretation of laboratory techniques in the clinical context, be able to: <ul style="list-style-type: none"> <li>• analyse, synthesise, evaluate and apply knowledge and</li> <li>• demonstrate the attitudes and behaviours necessary for professional practice as a consultant clinical scientist dealing with the complexities, uncertainties and tensions of professional practice of interpreting laboratory results at this level.</li> </ul>		
<b>Knowledge</b>	By the end of the training period the trainee will be able to demonstrate the ability to analyse, evaluate and synthesise relevant knowledge and its application to their professional practice in relation to: <ul style="list-style-type: none"> <li>• interpretation and clinical authorisation of laboratory results.</li> </ul>	FRCPATH Part 2, WPBA	1, 3
<b>Technical skills and procedures</b>	By the end of the training period the trainee will be able to demonstrate a critical understanding of current relevant research, theory and knowledge and its application to the performance, adaptation and mastery of the following technical procedures and laboratory skills: <ul style="list-style-type: none"> <li>• the technical process behind the results to distinguish the significant positive and negative results.</li> <li>• to look back on previous results and to decide the need for further tests/samples, including instigation of confirmation tests and referral to other laboratories where appropriate.</li> </ul>	WPBA	1, 2, 3
<b>Clinical skills</b>	By the end of the training period the trainee will be able to apply knowledge of the interpretation of laboratory techniques to perform, adapt and master the clinical skills necessary to manage to: <ul style="list-style-type: none"> <li>• correctly match the clinical information with the result.</li> </ul>	WPBA	3

**In-course assessment assignments**

Continuous assessments will need to be undertaken throughout the laboratory-based training period,. Specific assessments include the following:

- a critical review of an assay currently in use in the lab (approximately 1000 words)
- an audit of an assay currently in use in the lab, concentrating on the laboratory aspects

- an audit of the clinical utility of an assay.

The specific content of these assessments should be agreed with the educational supervisor.

Trainees are strongly encouraged to participate in clinical audit. The College provides advice and support to all pathologists by providing a selection of audits from the audit database to help individual members and trainees to plan their own audit. Clinical audits will help trainees to identify and promote good practice, provide training and education opportunities, help to ensure better use of resources, encourage increased efficiency, improve working relationships, communication and liaison between staff, service users and agencies. Further information is available on the College website [www.rcpath.org](http://www.rcpath.org) or by contacting the Clinical Effectiveness Unit on [audit@rcpath.org](mailto:audit@rcpath.org).

### **Responsibilities of the educational supervisor**

- To ensure that arrangements are made for the trainee to spend dedicated time on the benches. Laboratory staff should be aware that the trainee is to be regarded as member of the diagnostic team.
- To ensure that the trainee is able to gain experience in all the areas listed. If this is not possible, arrangements for an attachment to another laboratory offering a specific technique should be arranged.
- To regularly review trainee's progress with a senior clinical scientist or Biomedical Scientist on the relevant bench
- To prepare the trainee for independent clinical authorisation of results in a step-wise fashion, according to seniority of the trainee
- Remark on competency and progress of the trainee at least six-monthly in the trainee's portfolio, until the trainee is competent to report without supervision
- Ensure that at least 10% of trainee reports authorised independently are reviewed by the educational supervisor (until acquisition of Part 2) once a week; less frequently with increasing seniority. Ideally, trainees should be closely supervised by a medical consultant, consultant clinical scientist or senior FRCPATH trainee until the educational supervisor is confident of the trainee's ability to competently authorise results.
- To provide support and guidance to the trainee for completion of the in-course assessments.

### Stage 2 Module 3: Clinical aspects

This module should provide the trainee with sufficient clinical experience to practise at the consultant level. It will be a major component of this period essentially running throughout a large part of the post-FRCPath Part 2 training period. The learning will be through active participation in service delivery and it is expected that 50–80% of the trainee time will be spent on service commitments.

#### Objectives

1. To obtain in-depth knowledge and understanding of the principles and practice of clinical virology and related microbiology in the following areas (this list is not exhaustive but covers the main areas):
  - respiratory infections in the community, including mycoplasma, chlamydia, chlamydothila and *Coxiella burnetii* infections
  - infections (including (*Toxoplasma gondii* and *Pneumocystis jirovecii*) in immunocompromised patients (solid organ transplant recipients; haematological transplant recipients, HIV, congenital immunodeficiencies)
  - prion disease including vCJD
  - infections in paediatric patients including neonates
  - fetal infections and infections in pregnant women (including toxoplasmosis)
  - travel-related, non-UK endemic and epidemic viral infections (including arboviruses and viral haemorrhagic fever [VHF])
  - infections in adult and paediatric intensive care units (ICU) and special care baby unit (SCBU)
  - viral infections of concern in specialised units, e.g. neurology, infectious diseases, gastroenterology/hepatology
  - sexually transmitted infections (including HIV, treponemal infections, *Chlamydia trachomatis* and HPV).
2. To obtain in-depth knowledge of role of antivirals and immunisation (active and passive) in the management and control of viral infections.
3. To obtain in-depth knowledge on control of infection issues in both the hospital and community.
4. To obtain in-depth knowledge on occupational health and infection (including sharps injuries).
5. To be able to advise on emerging infections, e.g. pandemic influenza, Chikungunya, etc.
6. To obtain sufficient microbiology knowledge of infections in general, (e.g. fungal, parasitic and bacterial) to enable consideration of these in differential diagnosis of viral infections in all patients but particularly in immunocompromised patients.
7. To obtain in-depth knowledge and attitudes to enable the trainee (by completion of training) to advise independently without necessarily having normal working day access to laboratory results or support from the laboratory or colleagues.

Typical scenarios may include, but are not limited to:

- haemodialysis/organ donor microbial serological screening.
- suspected virus exposure to a potentially susceptible pregnant woman or an immunocompromised adult or child
- blood-borne virus exposure following a sharps injury or human bite
- blood-borne virus exposure from unprotected sexual exposure

- animal bite in the community including overseas
- infection control scenario in a hospital/ward/nursing home setting
- complex clinical scenario.

**Stage 2 Module 3: Clinical and treatment aspects**

Topic	Stage 2 Module 3 Clinical and treatment aspects	Assessment methods	GSP references
<b>Learning objective</b>	By the end of the training period trainees will, in respect of the clinical and treatment aspects of virology and gaining clinical competences to become an independent practitioner in clinical virology, be able to: <ul style="list-style-type: none"> <li>• analyse, synthesise, evaluate and apply knowledge</li> <li>• perform, adapt and master a range of technical and clinical skills and procedures and</li> <li>• demonstrate the attitudes and behaviours necessary for professional practice as a consultant clinical scientist dealing with the complexities, uncertainties and tensions of professional practice at this level.</li> </ul>		
<b>Knowledge</b>	By the end of the training period the trainee will be able to demonstrate the ability to analyse, evaluate and synthesise relevant knowledge and its application to their professional practice in relation to: <ul style="list-style-type: none"> <li>• giving appropriate clinical and management advice including:                             <ul style="list-style-type: none"> <li>– the aetiology and clinical presentation of infectious diseases.</li> <li>– the pathophysiology of the disease process</li> <li>– available diagnostic techniques and their limitations</li> <li>– available therapeutic measures and preventative measures</li> </ul> </li> <li>• show a good working knowledge of treatment and prevention of virus infections, including:                             <ul style="list-style-type: none"> <li>– antivirals                                     <ul style="list-style-type: none"> <li>○ knowledge of the mechanisms of action of the anti-viral drugs in use and under development, and the development of resistance to those drugs</li> <li>○ knowledge of the optimum treatment of viral infections in immunocompetent and immunocompromised patients and the differences in drug dosages, routes of administration, duration of treatment, and relevant side effects and drug interactions.</li> <li>○ knowledge of the role of antivirals in prophylaxis of viral infections in immunocompetent and immunocompromised patients including how to access drug dosage, route of administration and duration of prophylaxis.</li> <li>○ mechanisms of development of anti-viral resistance and how to reduce the risks of anti-viral resistance.</li> <li>○ knowledge of how to test for anti-viral resistance.</li> <li>○ knowledge of how to access current guidelines relating to anti-viral drugs and their use in</li> </ul> </li> </ul> </li> </ul>	FRCPATH Part 2, WPBA	1, 2, 3, 5

	<p>clinical practice.</p> <ul style="list-style-type: none"> <li>- b) vaccines: knowledge of:             <ul style="list-style-type: none"> <li>o viral vaccines in current use and an understanding of those under development.</li> <li>o indications and contra-indications and differences between the types of vaccines, i.e. live attenuated, killed, recombinant, sub-unit, DNA vaccines, etc.</li> <li>o adverse effects of vaccines</li> <li>o properties of available adjuvants</li> <li>o use of viral vaccines and their schedules of administration for both prevention and post exposure prophylaxis in the community, occupational health and clinical setting and in the context of travel related infections.</li> <li>o efficacy of the viral vaccines in current use and the guidance on post vaccination immunity checks.</li> </ul> </li> <li>- c) immunoglobulins: knowledge of:             <ul style="list-style-type: none"> <li>o the role of monoclonal and polyclonal human immunoglobulins for treatment, prevention and post-exposure prophylaxis of viral infections.</li> <li>o their efficacy and indications of use, dosage schedules and route of administration.</li> </ul> </li> <li>• demonstrate understanding of the importance of infection prevention and control in hospital and community setting, including knowledge of:             <ul style="list-style-type: none"> <li>- the epidemiological consequences of different diseases and of the systems available for disease control.</li> <li>- the reservoirs, sources, routes of transmission and portals of entry of common hospital; acquired and community acquired infections.</li> <li>- the interaction between the patient, environment and viruses.</li> <li>- disinfection and sterilisation in the hospital and primary care setting.</li> <li>- knowledge of public health principles as applied to COI.</li> <li>- evidence base for effectiveness of local, national and international standards guidelines for COI.</li> <li>- relevance of audit to COI.</li> <li>- contribution of COI to total quality management, risk and control assurance.</li> <li>- clinical governance and review body inspections as e.g. Clinical Pathology Accreditation (CPA), Care Quality Commission, etc.</li> <li>- importance of non-clinical areas as clinical waste, kitchens and laundry to COI issues and hospital-acquired infection (HAI) control.</li> </ul> </li> <li>• show awareness of the role of occupational health, including:             <ul style="list-style-type: none"> <li>- knowledge of inoculation incident management including follow-up protocols and post-exposure</li> </ul> </li> </ul>		
--	--	--	--

	<p>prophylaxis for BBVs.</p> <ul style="list-style-type: none"> <li>- knowledge of local, national and international guidelines and standards in relation to occupational exposure to infection and limitation of practice/exclusion from work.</li> <li>- knowledge of pre- and post- exposure prophylaxis regimes.</li> </ul> <ul style="list-style-type: none"> <li>• maintain up to date knowledge of emerging virus infections</li> <li>• demonstrate a working knowledge of clinical microbiology, especially:             <ul style="list-style-type: none"> <li>- knowledge of the impact of practice of medical microbiology on virology.</li> <li>- knowledge of basic medical microbiology to enable consideration of non-viral infections in the differential diagnosis of patients presenting with suspected viral infections.</li> <li>- knowledge of the diagnostic tests (and their limitations) available in the routine microbiology laboratory with understanding of further tests available at specialised centres.</li> <li>- familiarity with the professional responsibilities of being the first point of reference for clinical advice and sample investigation as an independent practitioner, including out of hours or similar environment.</li> </ul> </li> <li>• demonstrate competencies for advising independently, including knowledge (dependent on stage of training) of:             <p>during training for Part 1</p> <ul style="list-style-type: none"> <li>- knowledge of the out-of-hours repertoire</li> <li>- knowledge of the testing protocols for assays used out of hours, including the sensitivity and specificity of the test relative to standard tests.</li> <li>- knowledge of the limitations of the tests offered outside normal working hours.</li> </ul> <p>during training for Part 2</p> <ul style="list-style-type: none"> <li>• knowledge of correct interpretation of difficult test results, especially unconfirmed positive or equivocal results for BBV in source patients for needle stick injuries and in pre-transplant screens.                 <ul style="list-style-type: none"> <li>- treatment and prophylaxis: vaccines and immunoglobulins</li> <li>- knowledge of the acquisition, storage, availability and prescription of any vaccine or immunoglobulin controlled by the department that may be used at any time.</li> <li>- clinical advice, professional responsibilities out of hours</li> <li>- knowledge of the relevant clinical guideline appropriate to the case or investigation</li> <li>- knowledge of the health and safety legislation, control of infection guidelines and public health issues appropriate to the case or investigation.</li> </ul> </li> </ul> </li> </ul>		
<p><b>Technical skills and procedures</b></p>	<p>By the end of the training period the trainee will be able to demonstrate a critical understanding of current relevant research, theory and knowledge and its application to the performance, adaptation and mastery of the following technical procedures and laboratory skills:</p>	<p>WPBA, MSF</p>	<p>2, 3, 5</p>

	<ul style="list-style-type: none"> <li>• demonstrate             <ul style="list-style-type: none"> <li>– ability to carry forward understanding of virology at basic/cellular, clinical, laboratory and epidemiological level to clinical scenarios, i.e. patient management</li> <li>– ability to select and interpret relevant laboratory investigations to achieve a specific diagnosis or differential and to guide patient management</li> </ul> </li> <li>• demonstrate             <ul style="list-style-type: none"> <li>– ability to make accurate risk assessment and to recognise when control of infection action is required</li> <li>– ability to recognise the various sterilisation and disinfection processes and their indications and advantages</li> <li>– understanding of the principles behind bacterial, parasitic and fungal diagnostic techniques so as to be able to liaise with colleagues for the appropriate investigation and management of patients with microbial infections</li> </ul> </li> <li>• appropriately use laboratory resources when further investigations may be warranted (further tests undertaken, time taken for staff to set-up, and/or complete further tests or repeat results)</li> <li>• participate in the recommendation, testing and reporting of investigations with a high health protection profile (e.g. pandemic influenza, viral haemorrhagic fevers)</li> <li>• communicate significant results to health protection/public health personnel</li> <li>• communicate with national reference laboratories.</li> </ul>		
<p><b>Clinical skills</b></p>	<p>By the end of the training period the trainee will be able to apply knowledge of clinical and treatment aspects to perform, adapt and master the clinical skills necessary to manage to:</p> <ul style="list-style-type: none"> <li>• ability to:             <ul style="list-style-type: none"> <li>– choose most appropriate treatment</li> <li>– justify to colleagues the chosen course of action in relation to patient management.</li> <li>– select the most appropriate anti-viral or combination of anti-viral drugs for the treatment of viral infections</li> </ul> </li> <li>• ability to advise on:             <ul style="list-style-type: none"> <li>– use of anti-viral drugs for prophylaxis of infection for outbreak control or for prevention/suppression of infection in individual patients</li> <li>– dosage, route of administration and duration of treatment with specific agents or combinations of anti-viral drugs</li> <li>– recognition of and monitoring for development of resistance to the anti-viral drugs in current use and advises on the use of alternative drugs</li> </ul> </li> <li>• ability to advise on:             <ul style="list-style-type: none"> <li>– administration of viral vaccine for prevention and post-exposure prophylaxis for all patient groups including those travelling to countries where infections non-endemic to the UK are</li> </ul> </li> </ul>	<p>WPBA, MSF</p>	<p>1, 3</p>

	<p>prevalent</p> <ul style="list-style-type: none"> <li>- appropriate pre- and post- vaccination immunity checks</li> </ul> <ul style="list-style-type: none"> <li>• ability to advise on:             <ul style="list-style-type: none"> <li>- use of virus-specific immunoglobulins for prevention, prophylaxis or treatment of infection</li> <li>- use of normal immunoglobulin for prevention, prophylaxis or treatment of infection</li> </ul> </li> <li>• ability to describe the role of surveillance in infection prevention and control</li> <li>• ability to explain how the pressure for beds in a hospital may potentially conflict with effective infection prevention and control measures</li> <li>• demonstrate understanding of:             <ul style="list-style-type: none"> <li>- the ethical implications of BBVs for HCWs and for patients</li> <li>- the role of counselling</li> <li>- national guidelines</li> <li>- antiviral prophylactic protocols</li> <li>- understanding of the dynamics of viral infections causing hospital acquired infections</li> <li>- ability to describe the development and execution of infection prevention and control policies and processes in hospital and community setting</li> <li>- awareness of signs and symptoms and management implications of patients with non-viral infections</li> </ul> </li> <li>• use professional contacts appropriately (eg laboratory staff to arrange and discuss testing, notification of results to healthcare professionals, communication with on-call pharmacist for issue of immunoglobulin/vaccine, arranging courier)</li> <li>• advise appropriate sample collection according to the relevance of the clinical case and the test to be undertaken</li> <li>• be able to advise on:             <ul style="list-style-type: none"> <li>- need for urgent testing versus delayed testing</li> <li>- appropriate tests to be undertaken</li> <li>- appropriate test interpretation</li> <li>- appropriate follow-up regimen</li> <li>- treatment and management options available following the out of hours enquiry (e.g. the appropriate use of an immunoglobulin or antiviral recommended to a pregnant or immunocompromised patient)</li> <li>- infection control in a case (not involving ward closure)</li> </ul> </li> <li>• be competent in recommending giving or withholding treatment or prophylaxis in a complex clinical scenario or where laboratory results not easily accessible or where a decision has to be made on unconfirmed positive screens, e.g. equivocal results for BBV in source patients for needle stick</li> </ul>		
--	--	--	--

	<p>injuries and in pre-transplant screens</p> <ul style="list-style-type: none"> <li>• be aware when there is a need to discuss a complex case with a clinical colleague requiring the acquisition of further advice from an expert source (outside your institution) to complete the final clinical advice given to local clinicians</li> <li>• discuss with senior hospital managers the implementation of infection control measures (e.g. ward closures) in a potential outbreak scenario.</li> </ul>		
--	---	--	--

**In-course assessments:**

- write four case reports (different areas) in which the specialty trainee was involved, of 1000 words each, including literature review, written as for publication
- critical review of an outbreak the trainee was involved in managing. If this is non-virological, e.g. an infectious diarrhoea outbreak, this should first be approved by local and regional educational supervisor. The role of the trainee in the outbreak and what was learnt should be specified
- out-of-hours' logbook or similar record of equivalent experience as an independent practitioner. All advice given when practising independently and any relevant outcomes should be recorded and kept in the portfolio. Trainees should record what they have learnt
- attendance at an infection control meeting. Trainee should write a summary of the issues raised (not more than one A4 side).

**Responsibilities of the educational supervisor**

**General:**

- to ensure the trainee is sufficiently supported to give clinical advice. In the early stages of training, supervisor input will be greater (eg sitting with the trainee as they authorise reports and give advice).. With increasing experience, the trainee can be left alone providing their work/advice is reviewed at regular intervals. The aim is to prepare the trainee for independent practice as a consultant
- to provide the trainee with sufficient learning aids such as access to computers, books, national/international guidelines and up-to-date journals
- to ensure that the trainee is keeping all relevant documentation in their portfolio and that the assignments are reviewed locally
- to aid the trainee in identifying the nature and depth required of the clinical areas indicated above
- to ensure that adequate time is provided to attend relevant courses and meetings, including the infection control committee, and to ensure that relevant clinical attachments are arranged in a timely fashion
- to provide support and guidance to the trainee for completion of the in-course assessments.

**Specific:**

- attachment to occupational health department (if appropriate). Ensure collection in trainee portfolio of local and national occupational health guidelines (viral and related infections)
- ensure documentation in the portfolio of clinical advice given out of hours and/or during other episodes of independent practice.

**Stage 2 Module 4: Management**

This module should equip the trainee with the basic management skills required to run a modern virology laboratory. This will be achieved through on-the-job training and should include one formal management course. The module will be assessed by a formal pieces of work submitted as part of the portfolio. There are no time constraints but it is expected that the trainee will have made a major contribution to each document. The laboratory manager/educational supervisor will be expected to sign off the piece of work. The business case can reflect an on-going issue in the laboratory or may be a title given to the trainee by the educational supervisor.

Topic	Stage 2 Module 4 Management	Assessment methods	GSP references
<b>Learning objective</b>	By the end of the training period trainees will, in respect of management, be able to <ul style="list-style-type: none"> <li>• analyse, synthesise, evaluate and apply knowledge</li> <li>• perform, adapt and master a range of skills and</li> <li>• demonstrate the attitudes and behaviours necessary for professional practice as a consultant clinical scientist dealing with the complexities, uncertainties and tensions of professional practice at this level.</li> </ul>		
<b>Knowledge</b>	By the end of the training period the trainee will be able to demonstrate the ability to analyse, evaluate and synthesise relevant knowledge and its application to their professional practice in relation to: <ul style="list-style-type: none"> <li>• the structure of the NHS</li> <li>• the role of the virology laboratory in pathology as a whole (including reference laboratories)</li> <li>• the roles of clinical scientists, Biomedical Scientist and other laboratory healthcare staff and lines of accountability</li> <li>• skill mix requirements in laboratory</li> <li>• budget management</li> <li>• teamwork, including multidisciplinary working</li> <li>• leadership skills</li> <li>• time management</li> <li>• role of pathology networks</li> <li>• funding streams</li> <li>• external and internal quality assurance</li> <li>• laboratory accreditation and quality management systems.</li> </ul>	FRCPATH Part 2, WPBA, MSF	1
<b>Technical skills and procedures</b>	By the end of the training period the trainee will be able to demonstrate a critical understanding of current relevant research, theory and knowledge and its application to the performance, adaptation and mastery of the following technical procedures and laboratory skills: <ul style="list-style-type: none"> <li>• simple book-keeping</li> <li>• writing a business case</li> <li>• ability to interpret budget and financial planning</li> <li>• spreadsheet skills</li> <li>• ability to generate a rota.</li> </ul>	WPBA	1
<b>Clinical skills</b>			

**In-course written assessment:**

- produce an annual business plan for your laboratory after consultation with the laboratory manager and head of department
- or**
- prepare a business case for the introduction of a new service or diagnostic test to be introduced by the department.

**Responsibilities of the educational supervisor:**

- to arrange attendance at local meetings and to discuss outcomes with the trainee afterwards
- to provide the trainee with sufficient time, information about financial support and information regarding relevant courses
- to discuss and plan with the trainee the formal in-course assessments attached to this module, prior to inclusion in portfolio
- to arrange for the trainee to be tutored by senior laboratory clinical and Biomedical Scientist managers
- to provide support and guidance to the trainee for completion of the in-course assessments as well as workplace-based assessments.

**Stage 2 Module 5: Understanding research and development in virology**
**Duration:** minimum of 6 months

All HSS Trainees to undertake doctoral level research that either (i) meets the research requirements of the doctoral level training programme or (ii) results in a coherent body of papers that reaches the standard suitable for publication in peer reviewed journals, undertaken during the HSST programme *or in the immediate 3 years prior to HSST*. They will also be expected to present and defend their research at national /international scientific conferences.

Topic	Stage 2 Module 5 Understanding research and development in virology	Assessment methods	GSP references
<b>Learning objective</b>	By the end of the training period trainees will, in respect of understanding research and development in virology, be able to: <ul style="list-style-type: none"> <li>analyse, synthesise, evaluate and apply knowledge</li> <li>perform, adapt and master a range of technical and clinical skills and procedures and</li> <li>demonstrate the attitudes and behaviours necessary for professional practice as a consultant clinical scientist dealing with the complexities, uncertainties and tensions of professional practice at this level.</li> </ul>		
<b>Knowledge</b>	By the end of the training period the trainee will be able to demonstrate the ability to analyse, evaluate and synthesise relevant knowledge and its application to their professional practice in relation to: <ul style="list-style-type: none"> <li>established laboratory techniques for the investigation of an audit/clinical/laboratory-related project</li> <li>developing or optimising a novel or in-house technique to improve diagnostic or epidemiological investigative efficacy</li> <li>undertaking a piece of original scientific research</li> <li>research governance (see relevant generic module).</li> </ul>	FRCPATH Part 2, WPBA	1, 2, 3, 4
<b>Technical skills and procedures</b>	By the end of the training period the trainee will be able to demonstrate a critical understanding of current relevant research, theory and knowledge and its application to the performance, adaptation and mastery of the following technical procedures and laboratory skills: <ul style="list-style-type: none"> <li>ability to undertake a preliminary literature review around the project, a summary of this literature should be retained in the portfolio</li> <li>ability to write a one-page proposal outlining the study, suitable for submission to the College</li> <li>basic bench work skills associated with the project</li> <li>ability to keep clear concise records of results</li> <li>analytical skills relevant to project results</li> <li>ability to write up project in the form of a dissertation (max 6000 words), or formal publication or MSc/PhD thesis</li> <li>presentation skills.</li> </ul>	FRCPATH Part 2, WPBA	4
<b>Clinical skills</b>	By the end of the training period the trainee will be able to apply knowledge and understanding of research and development in virology, to perform, adapt and master the clinical skills necessary to manage: <ul style="list-style-type: none"> <li>the clinical issues in relation to research and development studies.</li> </ul>	WPBA	2

**In-course assessment:**

This can be **either**:

a) paper accepted for publication

**or**

b) project report

**or**

c) PhD thesis (retrospective approval).

**Responsibilities of the educational supervisor:**

- to ensure the trainee has at least three months' protected project time. This should be in blocks of no shorter than a week at a time
- to ensure that the funding for the smaller projects is available
- to ensure that, if the funding and/or expertise are not available for adequate execution of the project, the trainee has the opportunity for secondment to a more appropriate laboratory
- to ensure that the study or project is feasible given the time available
- to ensure that the trainee is able to attend the local postgraduate courses, for example in statistics or database handling, to equip them for this module.

**Stage 2 Module 6: Public health and epidemiology**

In this module, the trainee should understand the relationship between individual laboratories and public health as a whole. An awareness of both the scientific and epidemiological tools required for the investigation of outbreaks is also critical.

Topic	Stage 2 Module 6 Public health and epidemiology	Assessment methods	GSP references
<b>Learning objective</b>	By the end of the training period trainees will, in respect of public health and epidemiology, be able to: <ul style="list-style-type: none"> <li>• analyse, synthesise, evaluate and apply knowledge</li> <li>• perform, adapt and master a range of technical and clinical skills and procedures and</li> <li>• demonstrate the attitudes and behaviours necessary for professional practice as a consultant clinical scientist dealing with the complexities, uncertainties and tensions of professional practice at this level.</li> </ul>		
<b>Knowledge</b>	By the end of the training period the trainee will be able to demonstrate the ability to analyse, evaluate and synthesise relevant knowledge and its application to their professional practice in relation to: <ul style="list-style-type: none"> <li>• basic epidemiology, including study design</li> <li>• the principles of outbreak investigation</li> <li>• communicable disease surveillance</li> <li>• prevention and control of viral infections (including vaccination)</li> <li>• prophylaxis against viral infections (including the role of vaccines, immunoglobulins and anti-virals)</li> <li>• both classical and molecular techniques in epidemiological investigations, e.g. outbreak investigations of hepatitis B</li> <li>• awareness of viral pathogens in food and water microbiology</li> <li>• the role of PHE or equivalent bodies at local, regional and national levels.</li> </ul>	FRCPATH Part 2, WPBA	1, 2
<b>Technical skills and procedures</b>	By the end of the training period the trainee will be able to demonstrate a critical understanding of current relevant research, theory and knowledge and its application to the performance, adaptation and mastery of the following technical procedures and laboratory skills: <ul style="list-style-type: none"> <li>• basic statistics and bioinformatics appropriately</li> <li>• relevant laboratory investigations in outbreaks, e.g. of diarrhoea and vomiting, hepatitis, respiratory disease.</li> <li>• ability to collect and store data and use spreadsheets.</li> <li>• viral diversity and genotype/strain definitions (see basic virology module).</li> <li>• phylogenetic analysis of viral sequences.</li> <li>• authoritative advice on the use of vaccines and immunoglobulins.</li> </ul>	WPBA, MSF	2, 3, 4
<b>Clinical skills</b>	By the end of the training period the trainee will be able to apply knowledge of public health and epidemiology to perform, adapt and master the clinical skills necessary to manage to: <ul style="list-style-type: none"> <li>• recognise unusual patterns of disease and new outbreaks.</li> </ul>	WPBA	2, 3

**In-course assessments**

**Either**

- construction of a phylogenetic tree given sequence data and its application to a clinical problem. (NB trainees may satisfy the requirements of this assessment locally or undertake a course provided at PHE, Colindale.

**or**

- write a report and give a presentation to the department on local laboratory generated data, e.g. influenza epidemiology over a 12-month period, highlighting similarities and differences with national data or local surveillance data.

**Responsibilities of the educational supervisor:**

- to provide access to computers with Internet access
- to provide time to go on courses
- to guide trainee on preparation of report/departmental presentation
- to facilitate access to phylogenetic expertise. This may be available locally or be part of a course provided by PHE. If data for assessment is not available as part of a course, educational supervisor should liaise with colleague to provide the sequences.

**Other recommended courses for the module:**

- basic epidemiology and statistics course
- computer course to learn spreadsheet skills
- basic training in bioinformatics including molecular epidemiology through phylogenetic analysis
- microbiological, radiological and chemical hazards
- attendance at relevant local, national and international courses and meetings.

**Stage 2 Module 7: Optional modules**

**Stage 2 Module 7a: Supraregional/reference laboratory attachment**

This module is aimed at those trainees who would like to spend time considering an aspect of virology that is only available at a limited number of specialist centres or reference laboratories. Below are some examples, but the list is not exhaustive and the trainee is encouraged to come up with their own plans for this module. These would have to be approved by the local educational supervisor, CSTC and chief examiner. Time in an overseas laboratory with particular expertise would be encouraged.

Some examples might include (a) working in a laboratory offering anti-viral susceptibility testing, or (b) working with exotic or dangerous virus, for example in a Containment Level 4 facility.

**Stage 2 Module 7b: Anti-viral susceptibility**

This module outlines regular exposure to the use of antivirals in a clinic setting. The trainee should attend case discussions and ideally build up a cohort of patients to be discussed on a regular basis in either a hepatitis or HIV clinic, in addition to the experience gained in routine use of antivirals including resistance problems in such areas as influenza management and management of CMV infection in immunocompromised patients. A total of three months (or one clinical discussion /week for two years) should be undertaken to ensure that the trainee understands the practical issues antiviral use.

Topic	Stage 2 Module 7b Anti-viral susceptibility	Assessment methods	GSP references
<b>Learning objective</b>	By the end of the training period trainees will, in respect of anti-viral susceptibility understanding antivirals, their mechanisms of action, clinical applications, development of and testing for resistance, be able to: <ul style="list-style-type: none"> <li>• analyse, synthesise, evaluate and apply knowledge</li> <li>• perform, adapt and master a range of technical and clinical skills and procedures and</li> <li>• demonstrate the attitudes and behaviours necessary for professional practice as a consultant clinical scientist dealing with the complexities, uncertainties and tensions of professional practice at this level.</li> </ul>		
<b>Knowledge</b>	By the end of the training period the trainee will be able to demonstrate the ability to analyse, evaluate and synthesise relevant knowledge and its application to their professional practice in relation to: <ul style="list-style-type: none"> <li>• phenotypic versus genotypic testing</li> <li>• laboratory protocols, assay design, and choice of controls; limitations of assays should also be appreciated</li> <li>• relevant pharmacology; include knowledge of mechanisms of action, pharmacokinetics, interactions, toxicities</li> <li>• the processes for evaluation of new compounds</li> <li>• phase 1, 2 and 3 clinical trials. Maintain awareness of new compounds</li> <li>• the impact of antivirals on epidemiology of viral infections</li> <li>• viral dynamics and the spread of resistance within the population</li> <li>• how a reference laboratory works.</li> </ul>	FRCPATH Part 2, WPBA	2, 3

<b>Technical skills and procedures</b>	<p>By the end of the training period the trainee will be able to demonstrate a critical understanding of current relevant research, theory and knowledge and its application to the performance, adaptation and mastery of the following technical procedures and laboratory skills:</p> <ul style="list-style-type: none"> <li>• interpret resistance data and provide appropriate clinical advice</li> <li>• be able to manipulate and interpret genotypic data and compare it against sequences stored in databases</li> <li>• write clinical protocols for antiviral use.</li> </ul>	WPBA	2
<b>Clinical skills</b>	<p>By the end of the training period the trainee will be able to apply knowledge of anti-viral susceptibility to perform, adapt and master the clinical skills necessary to manage to:</p> <ul style="list-style-type: none"> <li>• recognise when patients may have a virus infection which is resistant to antiviral treatment.</li> </ul>	WPBA	3

**Responsibilities of the educational supervisor:**

To identify laboratories where the necessary skills can be obtained.

The following laboratories currently offer some antiviral resistance testing (this is not a comprehensive list):

- PHE, Colindale: Antiviral Unit: HIV , HSV; influenza
- PHE Birmingham, Heartlands Hospital: HIV, HBV, CMV
- King’s College Hospital: HIV, HSV, HBV
- Barts and the London Hospital: VZV HIV, HBV
- St Thomas’ Hospital: HIV, HBV
- University College Hospital, London: HIV, HBV
- Royal Free Hospital: HIV, HBV
- Manchester Royal Infirmary: HIV, HBV, CMV.

**Stage 2 Module 7c: Exotic and dangerous virus infections**

Topic	Stage 2 Module 7c Exotic and dangerous virus infections	Assessment methods	GSP references
<b>Learning objective</b>	<p>By the end of the training period trainees will, in respect of understanding the range of infections classified as requiring CL4 laboratory containment and their distribution, differential diagnosis, management and treatment and the importance of rabies and other lyssaviruses as human pathogens, be able to:</p> <ul style="list-style-type: none"> <li>• analyse, synthesise, evaluate and apply knowledge</li> <li>• perform, adapt and master a range of technical and clinical skills and procedures and</li> <li>• demonstrate the attitudes and behaviours necessary for professional practice as a consultant clinical scientist dealing with the complexities, uncertainties and tensions of professional practice at this level.</li> </ul>		
<b>Knowledge</b>	<p>By the end of the training period the trainee will be able to demonstrate the ability to analyse, evaluate and synthesise relevant knowledge and its application to their professional practice in relation to:</p> <ul style="list-style-type: none"> <li>• the legislative framework underpinning Health and Safety at Work including: <ul style="list-style-type: none"> <li>- Health and Safety At Work Act (1974)</li> <li>- RIDDOR</li> <li>- COSHH</li> <li>- Genetically Modified Organisms (Contained Use) Regulations (2001)</li> <li>- Management of Health and Safety At Work Regulations (1999)</li> <li>- Viral Haemorrhagic Fever Memorandum (1990)</li> <li>- Smallpox Plan (2003)</li> <li>- ACDP organism classification</li> </ul> </li> <li>• viral haemorrhagic fevers, the agents and the management of the ill patient <ul style="list-style-type: none"> <li>- smallpox, the virus and the disease, including an understanding of its potential as a bioterrorism agent</li> <li>- rabies and related lyssaviruses, including: <ul style="list-style-type: none"> <li>o virology</li> <li>o disease</li> <li>o epidemiological trends</li> <li>o control</li> </ul> </li> </ul> </li> <li>• CL4 laboratory design and practices.</li> </ul>	FRCPATH Part 2, WPBA	2
<b>Technical skills and procedures</b>	<p>By the end of the training period the trainee will be able to demonstrate a critical understanding of current relevant research, theory and knowledge and its application to the performance, adaptation and mastery of the following technical procedures and laboratory skills:</p> <ul style="list-style-type: none"> <li>• perform a risk assessment when required for all procedures undertaken in the laboratory.</li> </ul>	WPBA	2

	<ul style="list-style-type: none"> <li>• knowledge of regulations for transportation of patients with Category 4 infections.</li> </ul>		
<p><b>Clinical skills</b></p>	<p>By the end of the training period the trainee will be able to apply knowledge of exotic and dangerous virus infections to perform, adapt and master the clinical skills necessary to manage to describe:</p> <ul style="list-style-type: none"> <li>• clinical, virological and epidemiological features and how they affect management.</li> <li>• differential diagnosis and risk assessment of patients.</li> <li>• appropriate prophylactic regimens</li> <li>• relevant content of 'Memorandum on rabies: Prevention and control' DH 2000</li> <li>• cabinet and suited CL4 laboratory design, safety features.</li> <li>• Trexler isolator, constraints, international alternatives.</li> </ul>	<p>WPBA</p>	<p>3</p>

**Stage 2 Module 7d: Microbiology attachment**

Topic	Stage 2 Module 7d Microbiology attachment	Assessment methods	GSP references
<b>Learning objective</b>	<p>By the end of the training period trainees will, in respect of be able to:</p> <ul style="list-style-type: none"> <li>• build upon the understanding of laboratory and clinical aspects of microbiology acquired during the objective-based, structured specialist training prior to the FRCPATH Part 1 microbiology/virology examination</li> <li>• be aware of clinical presentation of infections due to microbial agents other than viruses in the community, hospital and critical care setting</li> <li>• understand the importance of considering microbial agents other than viruses in differential diagnosis of infection</li> <li>• advise on appropriate investigations and control of infection measures for commonly seen infections caused by bacteria, fungi and parasites</li> <li>• understand the basic principles of infection prevention and control for bacterial hospital-acquired infection</li> <li>• understand the role of the microbiologist in relation to public health microbiology.</li> <li>• analyse, synthesise, evaluate and apply knowledge</li> <li>• perform, adapt and master a range of technical and clinical skills and procedures and</li> <li>• demonstrate the attitudes and behaviours necessary for professional practice as a consultant clinical scientist dealing with the complexities, uncertainties and tensions of professional practice at this level.</li> </ul>		
<b>Knowledge</b>	<p>By the end of the training period the trainee will be able to demonstrate the ability to analyse, evaluate and synthesise relevant knowledge and its application to their professional practice in relation to:</p> <ul style="list-style-type: none"> <li>• laboratory aspects of clinical microbiology, including: <ul style="list-style-type: none"> <li>– appropriate staining and culture techniques.</li> <li>– antibiotic susceptibility testing.</li> <li>– the role of reference centres.</li> </ul> </li> <li>• clinical aspects of microbiology, including <ul style="list-style-type: none"> <li>– aetiology and clinical presentation of infectious diseases both in the community and hospital setting</li> <li>– pathophysiology of infection related disease processes with special reference to the differences between immunocompetent adults and children, immunocompromised adults and children, pregnancy, etc.</li> <li>– optimum treatment (including in neonates, children and pregnant women) of commonly seen infections and how to access current guidelines</li> <li>– relevance of assaying levels of antimicrobial agents in ensuring safe levels and effective levels</li> <li>– common infection problems in the ICU setting, e.g. ventilator-associated pneumonia, line infections, septicaemia</li> <li>– Pathophysiology of serious sepsis and rationale for intervention</li> <li>– common causes of infection in returning travellers with measures for preventing such infections</li> </ul> </li> </ul>	FRCPATH Part 2, WPBA	1, 2, 3, 5

	<ul style="list-style-type: none"> <li>- public health and epidemiology</li> <li>- epidemiology and distribution of important tropical infections, e.g. malaria, schistosomiasis, onchocerciasis, filariasis, trypanosomiasis, gastrointestinal (GIT) parasites, tuberculosis (TB), enteric fever, cholera, dysentery, etc.</li> <li>- epidemiological consequences of different infections and of the systems available for control</li> <li>- the general principles involved in immunisation programmes, occupational and travel health, agents of biological terrorism</li> <li>- the relevance of food, environmental and water (FEW) microbiology for public health</li> <li>- hospital-acquired infection (HAI) and control, including:             <ul style="list-style-type: none"> <li>- reservoirs, sources, routes of transmission and portals of entry of common HAIs</li> <li>- the interactions between the microbe and the patient, appreciating risk factors e.g. devices, antimicrobial exposure, underlying conditions</li> <li>- the importance of HAI in total quality management and clinical governance. The importance of screening for HAIs and monitoring alert organisms</li> <li>- disinfection and sterilisation in the hospital and primary care setting. The roles and responsibility of infection control team (ICT) and committee (ICC)</li> <li>- clinical waste, laundry and kitchen: their relevance and importance in HAI prevention and control</li> <li>- ventilation and airflows: importance of this in the theatre, isolation rooms and other relevant areas</li> </ul> </li> <li>- the process and limitations of all routine microbiology specimens received in the laboratory</li> <li>• understand current techniques for susceptibility testing</li> <li>• provide clinical advice based on interpretation of the above</li> <li>• determine specimen referral or comply with the indications for referral of specimens to reference facilities</li> <li>• show ability to:             <ul style="list-style-type: none"> <li>- assimilate clinical, laboratory and epidemiological information and to use this to differentiate between infections and other conditions</li> <li>- select and interpret appropriate tests</li> <li>- liaise between clinicians and laboratory</li> <li>- recognise and manage specific infection problems in the critically ill</li> <li>- justify a course of action</li> <li>- recognise the consequences of severe infection including sepsis syndrome</li> <li>- investigate and arrive at diagnosis for infections in returning travellers</li> </ul> </li> <li>• be able to:             <ul style="list-style-type: none"> <li>- advise on travel vaccination and prophylaxis for prevention of specific travel related infections</li> </ul> </li> </ul>		
--	--	--	--

	<ul style="list-style-type: none"> <li>- make accurate risk assessments and to recognise when urgent epidemiological action is required</li> <li>- understand methods of vaccine delivery, surveillance of immunisation programmes and evaluation of vaccine efficacy</li> <li>- give basic health and travel advice and able to refer to sources of information</li> <li>- recognise abnormal patterns of infection and to deal with the unexpected</li> <li>- use the FEW microbiology to support public health measures</li> <li>• show ability to:             <ul style="list-style-type: none"> <li>- describe the dynamics of common HAIs</li> <li>- distinguish infection from colonisation</li> <li>- participate in, and reflect on, surveillance and audit cycles</li> <li>- conduct a root cause analysis in instances of HAI</li> <li>- describe the disinfection and sterilisation processes, their indications, advantages and disadvantages</li> <li>- describe the role of ICT and ICC</li> <li>- describe these, including audit approaches</li> <li>- describe the principles of HAI and their importance.</li> </ul> </li> </ul>		
<p><b>Technical skills and procedures</b></p>	<p>By the end of the training period the trainee will be able to demonstrate a critical understanding of current relevant research, theory and knowledge and its application to the performance, adaptation and mastery of the following technical procedures and laboratory skills:</p> <ul style="list-style-type: none"> <li>• knowledge of laboratory aspects of clinical microbiology, including:             <ul style="list-style-type: none"> <li>- appropriate staining and culture techniques</li> <li>- antibiotic susceptibility testing</li> <li>- the role of reference centres</li> <li>- the relevance of assaying levels of antimicrobial agents in ensuring safe levels and effective levels</li> <li>- the process and limitations of all routine microbiology specimens received in the laboratory</li> </ul> </li> <li>• current techniques for susceptibility testing.</li> <li>• specimen referral or comply with the indications for referral of specimens to reference facilities</li> <li>• ability to select and interpret appropriate tests.</li> </ul>	<p>WPBA</p>	<p>2, 3</p>
<p><b>Clinical skills</b></p>	<p>By the end of the training period the trainee will be able to apply knowledge of microbiology to perform, adapt and master the clinical skills necessary to manage:</p> <ul style="list-style-type: none"> <li>• the aetiology and clinical presentation of infectious diseases both in the community and hospital setting</li> <li>• the pathophysiology of infection related disease processes with special reference to the differences</li> </ul>	<p>WPBA, MSF</p>	<p>1, 3</p>

	<p>between immunocompetent adults and children, immunocompromised adults and children, pregnancy, etc.</p> <ul style="list-style-type: none"> <li>• the optimum treatment (including in neonates, children and pregnant women) of commonly seen infections and how to access current guidelines</li> <li>• the relevance of assaying levels of antimicrobial agents in ensuring safe levels and effective levels</li> <li>• common infection problems in the ICU setting, e.g. ventilator-associated pneumonia, line infections, septicæmia</li> <li>• serious sepsis and rationale for intervention</li> <li>• common causes of infection in returning travellers with measures for preventing such infections.</li> </ul> <p>Public health and epidemiology:</p> <ul style="list-style-type: none"> <li>• Epidemiology and distribution of important tropical infections, e.g. malaria, schistosomiasis, onchocerciasis, filariasis, trypanosomiasis, gastrointestinal (GIT) parasites, tuberculosis (TB), enteric fever, cholera, dysentery, etc.</li> <li>• epidemiological consequences of different infections and of the systems available for control</li> <li>• the general principles involved in immunisation programmes, occupational and travel health, agents of biological terrorism</li> <li>• the relevance of food, environmental and water (FEW) microbiology for public health.</li> </ul> <p>Show sound knowledge of Hospital-acquired infection (HAI) and control, including:</p> <ul style="list-style-type: none"> <li>• The reservoirs, sources, routes of transmission and portals of entry of common HAIs</li> <li>• The interactions between the microbe and the patient, appreciating risk factors, e.g. devices, antimicrobial exposure, underlying conditions</li> <li>• The importance of HAI in total quality management and clinical governance. --	--	--	--

	<ul style="list-style-type: none"> <li>• investigate and arrive at diagnosis for infections in returning travellers.</li> </ul> <p>Be able to:</p> <ul style="list-style-type: none"> <li>• advise on travel vaccination and prophylaxis for prevention of specific travel related infections</li> <li>• make accurate risk assessments and to recognise when urgent epidemiological action is required</li> <li>• understand methods of vaccine delivery, surveillance of immunisation programmes and evaluation of vaccine efficacy</li> <li>• give basic health and travel advice and able to refer to sources of information</li> <li>• recognise abnormal patterns of infection and to deal with the unexpected</li> <li>• use the FEW microbiology to support public health measures.</li> </ul> <p>Show ability to:</p> <ul style="list-style-type: none"> <li>• describe the dynamics of common HAIs</li> <li>• distinguish infection from colonisation</li> <li>• participate in, and reflect on, surveillance and audit cycles</li> <li>• conduct a root cause analysis in instances of HAI</li> <li>• describe the disinfection and sterilisation processes, their indications, advantages and disadvantages</li> <li>• describe the role of ICT and ICC</li> <li>• describe these, including audit approaches</li> <li>• describe the principles of HAI and their importance</li> <li>• a broad knowledge of the aetiology and clinical presentation of infectious diseases both in the community and hospital setting.</li> </ul>		
--	--	--	--

**Responsibilities of the educational supervisor:**

- to arrange for a suitable attachment for the trainee
- to ensure that sufficient time is made available to the trainee for the attachment.

**Stage 2 Module 7e: Further developing virology subspecialty skills**

**Objective:**

To allow trainee to develop a particular interest and expertise in a core component of the curriculum. The training format is already described under the core component. This optional module, however, is to give the trainee an opportunity to add to their virology training experience in another centre (including the PHE Virology Reference Laboratory at Colindale) and it is expected that this will be delivered as a short attachment (6–12 weeks) to a different virology centre.

**Responsibility of the educational supervisor:**

To arrange an attachment for the trainee to a different virology centre. The virology centre chosen should be on the basis of the trainee needs and the particular core component in which the trainee wishes to gain extended training.

**Summary of assessments for core modules**

Below is a table summarising the assessments that must be completed before FRCPath Part 2 is attempted.

Please see relevant module for a more comprehensive description of what is required.

Core module	Assessment	Page in curriculum
<b>Basic virology</b>	3000-word review article.	63
<b>Virology</b> Laboratory techniques	A critical review of an assay currently in use in the lab (approximately 1000 words). An audit of an assay (laboratory aspects). An audit of the clinical utility of an assay.	65
Clinical aspects	Write four case reports (1000 words each). Critical review of an outbreak. Out-of-hours' logbook. Attendance at an infection control meeting.	70
<b>Management</b>	Business plan for laboratory or business case.	77
<b>Understanding research and development in virology</b>	A piece of work related to a laboratory based project OR a higher degree.	79
<b>Public health and epidemiology</b>	Phylogenetic analysis problem. Report and departmental presentation on laboratory generated data.	81

**Appendix 1**

**Acronyms and abbreviations**

AHCS	Academy for Healthcare Science
AHSN	Academic Health Science Network
AoMRC	Academy of Medical Royal Colleges
BBV	Blood-borne virus
CbD	Case-based discussion
CCHST	Certificate of Completion of Higher Scientist Training
CFT	Complement fixation test
CMV	Cytomegalovirus
COI	Control of infection
COSHH	Control of Substances Hazardous to Health
CPA	Clinical Pathology Accreditation
CPPD	Continuing personal and professional development
CQC	Care Quality Commission
CSO	Chief Scientific Officer
CSTC	College Specialty Training Committee
DH	Department of Health
DNA	Deoxyribonucleic acid
DOPS	Directly observed practical skills
EIA or ELISA	Enzyme-linked immunoassay or Enzyme-linked immunosorbent assay
ESCV	European Society for Clinical Virology
FEW	Food, environmental and water
FRB	Final Review Board
FRCPATH	Fellowship of The Royal College of Pathologists
GCP	Good Clinical Practice
GIT	Gastrointestinal
GMC	General Medical Council
GSP	Good Scientific Practice
HAI	Hospital-acquired infection
HCPC	Health Care Professions Council
HCS	Healthcare science
HCW	Healthcare Worker
HEE	Health Education England
HEI	Higher education institution
HIV	Human immunodeficiency virus
HPV	Human Papilloma Virus
HSS	Higher Specialist Scientist
HSST	Higher Specialist Scientist Training
ICC	Infection Control Committee

ICS	Innovation in Clinical Sciences
ICT	Infection Control Team
ICU	Intensive care unit
IF	Immunofluorescence
IgG	Immunoglobulin G
IgM	Immunoglobulin M
LETBs	Local Education and Training Boards
MAHSE	Manchester Academy for Healthcare Science Education
MDT	Multi-Disciplinary Team
MHRA	Medicines and Healthcare products Regulatory Agency
MSC	Modernising Scientific Careers
MSF	Multi-source feedback
NHS	National Health Service
NHSSTN	National Higher Specialist Scientific Training Number
NICE	National Institute for Health and Clinical Excellence
NSHCS	National School of Healthcare Science
OCE	Observed Clinical Event
OLAT	Online Learning and Assessment Tool
OSCSA	Objective Structured Clinical Skills Assessment
OSFA	Objective Structured Final Assessment
PD	Professional Doctorate
PHE	Public Health England
PSA	Professional Standards Authority
RIDDOR	Reporting of Injuries, Diseases and Dangerous Occurrences Regulations
SAC	Specialist Advisory Committee
SCBU	Special care baby unit
SGM	Society for General Microbiology
SOP	Standard operating procedures
